Jakob von Uexküll and Philosophy Francesca Micheli, Kristian Köchy, 2019-12-09 Dismissed by some as the last of the anti Darwinians his fame as a rigorous biologist even tainted by an alleged link to National Socialist ideology it is undeniable that Jakob von Uexküll 1864 1944 was eagerly read by many philosophers across the spectrum of philosophical schools from Scheler to Merleau Ponty and Deleuze and from Heidegger to Blumenberg and Agamben What has then allowed his name to survive the misery of history as well as the usually fatal gap between science and humanities This collection of essays attempts for the first time to do justice to Uexküll's theoretical impact on Western culture By highlighting his importance for philosophy the book aims to contribute to the general interpretation of the relationship between biology and philosophy in the last century and explore the often neglected connection between continental philosophy and the sciences of life Thanks to the exploration of Uexküll's conceptual legacy the origins of cybernetics the overcoming of metaphysical dualisms and a refined understanding of organisms appear variedly interconnected Uexküll's background and his relevance in current debates are thoroughly examined as to appeal to undergraduate and postgraduate students as well as postdoctoral researchers in fields such as history of the life sciences philosophy of biology critical animal studies philosophical anthropology biosemiotics and biopolitics

Starting from Scratch John Matthews, 2010-10-28 This book compares the beginning of symbolic thought in human infancy with that of our close primate relatives the chimpanzees The author investigates the precursors of symbolism by studying the actions and interactions of a small group of these intelligent non human primates who live in Singapore Zoo Drawing upon his years of detailed observations Matthews offers an in depth analysis and interpretation of chimp behaviour to present an unprecedented account of the beginnings of symbolic thought The book shows that the actions the chimpanzees perform have structural and semantic similarities with the actions of emergent expression and representation we find in human

infancy Of great importance is the finding that chimpanzee mark making activity is not an artefact of human interference but part of chimpanzee culture Young chimpanzees seem to be introduced to acts of pretence and imagination by older and more experienced ones and taught the rudiments of expression representation and symbolism The implications for our understanding of symbolism language art and education are enormous as are those about our origins and our place within nature The book is written in an accessible style for both specialist and non specialist readers and illustrated with the author's drawings and photographs
