

The particulate nature of matter

SOLIDS, LIQUIDS AND GASES

States of matter

Substances can exist as solids, liquids or gases.

1. Solids

In a solid the particles (molecules) vibrate about fixed positions within a close packed regular structure.

The particles cannot move in-between each other which results in a solid having a definite shape and fixed volume.

2. Liquids

When a solid is heated it may melt to form a liquid.

In a liquid the particles (molecules) move in-between each other. A liquid does not have a definite shape but it does have a fixed volume.

3. Gases

When a gas is heated it may evaporate or boil to form a gas.

In a gas the particles (molecules) move in-between each other and are much further apart than they are in a liquid.

A gas takes up the shape and volume of its container.

Secret Nature of Matter Richard Gordon, 2017-06-06 Richard Gordon maps out new territory in the rarely explored intersection of science and spirituality in this fascinating investigation of the profound relationship between matter and consciousness Building on the Quantum Touch technique he developed in previous books Gordon explains how the hands on energy healing technique that he uses to help to alleviate nerve pain headaches back pain hip pain TMJ and more provides a unique window onto the secret nature of matter He explains how by examining pelvic and occipital torsion and then aligning people without the use of touch or suggestion he is able to run a wide range of simple experiments that challenge many dogmas of science This book teaches readers the technique along with 57 easy to reproduce experiments that allow them to test the results These experiments clearly demonstrate that our consciousness can profoundly influence matter and that an object charged with energy and intent can dramatically affect us physiologically in seconds
