

Relationship of exposure to UVR and Burden of Disease

- Skin cancer is caused primarily by exposure to UV radiation such as sunbeds.
- Globally in 2000, over 2,00,000 cases of melanoma were diagnosed and 65 000 melanoma-associated deaths.
- Worldwide approximately 18 million people are blind as a result of cataracts, of these 5% of all cataract related disease burden is directly attributable to UV radiation exposure.

Skin Cancer And Uvradiation:

Skin Cancer and UV Radiation Peter Altmeyer, Klaus Hoffmann, Markus Stücker, 2012-12-06 UV radiation is recognized as the major risk factor for skin cancer. For the last three decades the incidence and mortality of skin cancer have been increasing steadily in almost all parts of the world. Unfortunately there have been very few advances in the management and treatment of skin cancer. In comparison to other malignant tumors skin cancer offers the unique opportunity to identify this tumor at an early stage. Thus there is strong interest in preventing death by early diagnosis and prompt treatment. The proceedings of the International Congress on Skin Cancer and UV Radiation which was held in Bochum Germany in October 1996 reflect the newest scientific standards in the field of skin cancer. The conference in Bochum was a platform for leading scientists from all over the world to discuss the complexity and diversity of UV radiation in its interaction with the skin. Starting with basic science like physiology, immunology and molecular biochemistry of the skin as influenced by UV radiation, the book presents a profound survey into the field of skin cancer by focusing on the latest scientific results in prevention, early detection, treatment and epidemiology. The congress in Bochum in 1996 was organized to provide a starting point for coordinated European strategies against skin cancer with internationally renowned scientists. *Exposure to Artificial UV Radiation and Skin Cancer* IARC Working Group on Risk of Skin Cancer and Exposure to Artificial Ultraviolet Light, International Agency for Research on Cancer, 2006 This report represents the views and expert opinions of an IARC Working Group that met in Lyon France 27-29 June 2005. Skin is the largest human organ which continually reconstructs itself to ensure its viability, integrity and

ability to provide protection for the body This protection can be compromised by the aging of the skin which ultimately promotes skin inflammation impaired wound repair and increased risk of skin cancer The book entails mechanistic insights into the UVR induced immunomodulation and DNA damage in the skin to delineate the pathogenesis and develop novel ways for prevention of photoaging of the skin cells It also elucidates the potential of nanotechnology in the treatment of skin cancer Further it discusses the bioinformatics approaches to understand the molecular mechanism of photoaging and cancer formation

Go,John Milner,2011-05-02 Nutritional oncology is an increasingly active interdisciplinary field where cancer is investigated as both a systemic and local disease originating with the changes in the genome and progressing through a multi step process which may be influenced at many points in its natural history by nutritional factors that could impact the prevention of cancer the quality of life of cancer patients and the risk of cancer recurrence in the rapidly increasing population of cancer

survivors Since the first edition of this book was published in 1999 the idea that there is a single gene pathway or single drug will provide a cure for cancer has given way to the general view that dietary environmental factors impact the progression of genetic and cellular changes in common forms of cancer This broad concept can now be investigated within a basic and clinical research context for specific types of cancer This book attempts to cover the current available knowledge in this new field of nutritional oncology written by invited experts This book attempts to provide not only the theoretical and research basis for nutritional oncology but will offer the medical oncologist and other members of multidisciplinary groups treating cancer patients practical information on nutrition assessment and nutritional regimens including micronutrient and phytochemical supplementation The editors hope that this volume will stimulate increased research education and patient application of the principles of nutritional oncology
