Environmental Politics and Liberation in Contemporary Africa M.A. Salih, 2013-03-14 Nowadays the environment looms large in the analysis of conflict in developing societies and the precise role it plays is the subject of an ongoing debate The debate has moved on from the earlier but still popular notions of power struggles class struggles and ethnic conflicts to a perception of conflict as the product of intense group competition for resources Where the state controls the distribution of resources itself inevitably becomes party to conflicts whose bone of contention is access to state power as the most efficient means of gaining access to resources The resources in question are social health education transportation communication recreation etc and material land water housing jobs contracts licenses permits etc In parts of the world and especially in Africa diminishing resources and authoritarian state rule exacerbate group competition leading to political confrontation This is the line I have followed in analysing conflict in the Horn of Africa Markakis 1987 1998 Mohamed Salih's first contribution in this volume is to move the debate a step beyond this line which can be criticized as unduly materialist He does it by bringing culture into the realm of resources not only as a resource in itself but also as the agency that assigns natural resources their value Culture thus becomes a contextual element in conflict over resources whose value is culturally determined

Skin Cancers Caterina La Porta, 2011-11-14 Skin cancers are the fastest growing type of cancer in the United States and represent the most commonly diagnosed malignancy surpassing lung breast colorectal and prostate cancer In Europe the British Isles have been the highest rates of skin cancer in children and adolescents The overall idea of this book is to provide the reader with up to date information on the possible tools to use for prevention diagnosis and treatment of skin cancer Three main issues are discussed risk factors new diagnostic tools for prevention and strategies for prevention and treatment of skin cancer using natural compounds or nano particle drug delivery and photodynamic therapy

Skin Cancer and UV Radiation Peter Altmeyer, Klaus Hoffmann, Markus Stücker, 2012-12-06 UV radiation is recognized as the major risk factor for skin cancer For the last three decades the incidence and mortality of skin cancer have been increasing steadily in almost all parts of the world Unfortunately there have been very few advances in the management and treatment of skin cancer In comparison to other malignant tumors skin cancer offers the unique opportunity to identify this tumor at an early stage Thus there is strong interest in preventing death by early diagnosis and prompt treatment The proceedings of the International Congress on Skin Cancer and UV Radiation which was held in Bochum Germany in October 1996 reflect the newest scientific standards in the field of skin cancer The conference in Bochum was a platform for leading scientists from all over the world to discuss the complexity and diversity of UV radiation in its interaction with the skin Starting with basic science like physiology immunology and molecular biochemistry of the skin as influenced by UV radiation the book presents a profound survey into the field of skin cancer by

focusing on the latest scientific results in prevention early detection treatment and epidemiology The congress in Bochum in 1996 was organized to provide a starting point for coordinated European strategies against skin cancer with internationally renowned scientists *Bioengineering of the Skin* Enzo Berardesca, Peter Elsner, Howard I. Maibach, 1994-10-27 This book focuses on the objective measurement of two major parameters of skin function blood flow and erythema **Nickel and the Skin** Jurij J. Hostynek, Howard I. Maibach, 2019-08-15 First published 2002 Allergic contact dermatitis from nickel is a continuing and increasing health problem Nickel dermatitis may occur in sensitized individuals following contact with nickel containing items such as jewelry zippers buttons and other objects by nickel leaching from implants and prostheses and following occupational exposures Although the most common of the health effects associated with exposure to nickel the skin penetration of nickel and its compounds is poorly understood Nickel and the Skin Absorption Immunology Epidemiology and Metallurgy gives an extensive updated review of major topics and new topics and covers material progress in the field of nickel hypersensitivity Its content complements the mandate of NiPERA the Nickel Producers Environmental Research Association which is to promote the health and safety of those exposed to nickel or nickel containing products in the workplace and general environment Many books on the toxicology of metals discuss nickel and its alloys in general terms This one provides you with in depth information on the causes diagnosis prognosis and prevention all in one source Nickel and the Skin Absorption Immunology Epidemiology and Metallurgy provides a guide to the evaluation and treatment of what has become the most common cause of allergic contact dermatitis **Tumor Models in Cancer Research** Beverly A. Teicher, 2001-11-07 Beverly A Teicher and a panel of leading experts comprehensively describe for the first time in many years the state of the art in animal tumor model research The wide array of models detailed form the basis for the selection of compounds and treatments that go into clinical testing of patients and include syngeneic models human tumor xenograft models orthotopic models metastatic models transgenic models and gene knockout models Synthesizing many years experience with all the major in vivo models currently available for the study of malignant disease Tumor Models in Cancer Research provides preclinical and clinical cancer researchers alike with a comprehensive guide to the selection of these models their effective use and the optimal interpretation of their results **Bioengineering of the Skin** Klaus-Peter Wilhelm, Peter Elsner, Enzo Berardesca, Howard I. Maibach, 1996-12-03 Through continuous research and development of modern instrumentation it is now possible to visualize minute structures of the skin surface not visible to the human eye Bioengineering of the Skin Skin Surface Imaging and Analysis written by an internationally based group of scientists addresses engineering techniques for visualizing and analyzing skin surface images and profiles This skin bioengineering reference offers comprehensive information about the technology of instruments in this field and the art of applying them in experimental studies It explains what the instruments measure and why and when they should be used in skin research and product testing *Oxidants and Antioxidants in Cutaneous Biology* Jens Thiele, Peter Elsner, 2001-01-01 Are free radicals

and reactive oxygen species relevant to dermatopathology Do antioxidants protect against free radical mediated cutaneous diseases and aging To these and further current questions in the rapidly progressing field of basic and applied skin research this up to date volume provides a scientific basis It presents state of the art reviews on the progress in detection of free radicals and antioxidants and their responses to environmental oxidative stressors Furthermore several expert contributions focus on the exciting developments in oxidative DNA damage and UVB and UVA induced signal transduction in skin Finally information is given on new antioxidant protection strategies against skin carcinogenesis and skin aging which may be fundamental for the pharmaceutical or skin care products of tomorrow Due to its unique and up to date collection of state of the art contributions by many of the world s leading scientists in the field this book will be essential reading for dermatologists cosmetologists pharmacologists and environmental toxicologists

Chemical Carcinogenesis Trevor M. Penning, 2011-03-03 This volume will provide a contemporary account of advances in chemical carcinogenesis It will promote the view that it is chemical alteration of the DNA that is a route cause of many cancers The multi stage model of chemical carcinogenesis exposure to major classes of human carcinogens and their mode of action will be a focal point The balance between metabolic activation to form biological reactive intermediates and their detoxification ensuing DNA lesions and their repair will be profiled It will describe the chemical changes that occur in DNA that result from endogenous insults including epigenetic changes that lead to gene silencing It will describe major mechanisms of mutagenesis affects on tumor suppressor genes and proto oncogenes and how cell cycle check points can be by passed by the stealth like properties of chemical carcinogens Environmental agents that can promote tumor formation will be discussed The monograph will have wide appeal as a knowledge base for graduate students post doctoral fellows and faculty interested in this aspect of cancer causation and research

Biophysical and Physiological Effects of Solar Radiation on Human Skin Paolo U. Giacomoni, 2007 World class contributors provide the reader with information on the clinical effects of solar radiation such as inflammation immune suppression cancer and aging

Cancer and Nutrition J. Mason, G. Nitenberg, 2000-07 Estimates suggest that approximately 35% of cancers are a consequence of suboptimal diet In this publication epidemiologists basic scientists and clinicians review both the epidemiology and mechanistic aspects of nutrition in the prevention of lung breast colorectal and prostate cancer Moreover an update on the status of the European EPIC study is given Protein calorie malnutrition of a clinically significant degree is common among cancer patients and contributes significantly to both morbidity and mortality Besides causing death solely from progressive cachexia malnutrition leads to diminished cardiac performance an increased susceptibility to infection and a diminished response to chemotherapy Reversing or even attenuating this cachexia is an extremely problematic issue Topics covered here include mechanisms by which malnutrition evolves in cancer patients animal models of cancer wasting controversial nutritional interventions in cancer patients and nutritional support in pediatric patients and bone marrow transplantation It has become clear that nutritional oncology must be regarded as a part of oncology and that it

should be integrated with genetics and molecular biology in the care of the cancer patient This book will appeal to a wide spectrum of professionals concerned with the prevention and treatment of cancer especially clinical and basic researchers and clinicians
