Skin Pharmacology and Toxicology Corrado L. Galli, Christopher N. Hensby, Marina Marinovich, 2012-12-06 Major skin diseases including acne psoriasis and eczema affect the majority of the population at some time in their lives In general these diseases are physically and psychologically disfiguring for the sufferers furthermore by their very chronic nature skin diseases unlike most other disease processes present both acute and chronic therapy problems In addition the chronic nature of these diseases can present certain economic problems Firstly chronic therapy is becoming increasingly expensive and secondly patients adhering to a strict treatment regimen will frequently be absent from their gainful employment for either medical consultation or treatment Given that in all NATO countries the average age of the population is continually increasing these chronic skin diseases will increase in importance in the coming years Furthermore as the average population age increases additional disease processes such as skin photodamage and carcinogenicity risk becoming major areas of therapeutic concern This book reviews in detail the major scientific areas of interest for research and clinical scientists working in skin pharmacology and toxicology The basic principles relating to an understanding of how drugs and chemicals may influence either the skin or the body as a whole are discussed in detail by recognized international scientific experts *Skin Pharmacology and Toxicology* Corrado L Galli, Christopher N Hensby, Marina Marinovich, 1990-01-01

Recent Advances in the Development and Germination of Seeds R.B. Taylorson, 2012-12-06 These Proceedings are a product of the International Workshop on Seeds held in Williamsburg Virginia USA at the College of William and Mary during the week of August 6 11 1989 Sixty eight participants attended The location provided a scenic and historical setting for the excellent work presented Good facilities and amenities also contributed to the success of the meeting The Proceedings present the substance of the main lectures given at this meeting In addition there were 29 brief paper presentations and 30 poster presentations which have been summarized in abstract form in a separate publication This meeting represents the third such meeting of a diverse group of scientists interested in the behavior of seeds both in an agricultural sense and as tools for the advancement of more particular subject matter The first meeting was held in Jerusalem Israel in 1980 and the second in Wageningen The Netherlands in 1985 A fourth meeting is being planned The Editor and Organizer wishes to thank not only the contributors to this volume for their efforts but also all the other participants whose combined efforts made this meeting a great success

Modern Concepts in Penicillium and Aspergillus Classification Robert A. Samson, John I. Pitt, 2013-11-11 In our view the First International Penicillium and Aspergillus Workshop held in Baarn and Amsterdam in May 1985 was a great success The assembly in one place of so many specialists in these two genera produced both interesting viewpoints and lively discussions But more particularly a remarkable cohesion of ideas emerged borne primarily of the realisation that taxonomy has passed

from the hands of the solitary morphologist The future of taxonomy lay in collaborative and multidisciplinary studies embracing morphology physiology and newer methodologies Penicillium and Aspergillus Workshop was borne logically The Second International from the first and was held in Baarn on May 8 12 1989 It was attended by 38 scientists from 16 countries At this Workshop we have attempted to move further into new methods especially by bringing together molecular biologists medical and food mycologists and biochemists as well as more traditional taxonomists We feel that the meeting contributed greatly to dialogue between taxonomists and also fundamental and applied mycologists At the meeting we became aware that the approach to taxonomy of these genera is now becoming more pragmatic with an increasing emphasis on consensus and on stability of names This is a noteworthy development which we as editors welcome So many species in Penicillium and Aspergillus are economically important in biotechnology foods and medicine and practical stable taxonomy is of vital importance These Proceedings comprise 40 papers divided into 9 chapters

DNA Repair Mechanisms and Their Biological Implications in Mammalian Cells M. Lambert, 2013-03-09 This volume contains edited contributions from the speakers at the NATO Advanced Research Workshop on DNA Repair Mechanisms and Their Biological Implications in Mammalian Cells held October 1 6 1988 at the Abbaye Royale de Fontevraud Fontevraud France The meeting was dedicated to Paul Howard Flanders Yale University New Haven CT 1919 1988 whose seminal contributions to the DNA repair field include the discovery of the excision repair pathway the elucidation of post replication repair in E coli the isolation of the *lexA* and *recC* mutants and his extensive work on the enzymology of RecA A plethora of recent developments in DNA repair mechanisms and related processes in mammalian cells have advanced our understanding of this field in a number of different areas and have given new emphasis to the ways these systems both resemble DNA repair processes in other groups of organisms in some respects yet are strikingly different from them in others Within the past decade there have been a number of international conferences on DNA damage and repair mechanisms but none has been focused on these processes in mammalian cells

Plant Aging Roberto Rodríguez,R.Sanchez Tamés,D.J. Durzan,2012-12-06 For many the terms aging maturation and senescence are synonymous and used interchangeably but they should not be Whereas senescence represents an endogenously controlled degenerative programme leading to plant or organ death genetic aging encompasses a wide array of passive degenerative genetic processes driven primarily by exogenous factors Leopold 1975 Aging is therefore considered a consequence of genetic lesions that accumulate over time but by themselves do not necessarily cause death These lesions are probably made more severe by the increase in size and complexity in trees and their attendant physiology Thus while the withering of flower petals following pollination can be considered senescence the loss of viability of stored seeds more clearly represents aging Norden 1988 The very recent book Senescence and Aging in Plants does not discuss trees the most dominant group of plants on the earth Yet both angiospermic and gymnospermic trees also undergo the above phenomena but less is known about them Do woody plants senesce or do they just age What is phase change Is this synonymous with maturation While it is now becoming recognized that there is no programmed senescence in trees senescence of their parts even in gymnosperms e g needles of temperate conifers last an average of 3 5 years is common but aging is a readily acknowledged phenomenon In theory at least in the absence of any programmed senescence trees should live forever but in practice they do not

Advances in Swine in Biomedical Research L.B. Schook,M.E. Tumbleson,2013-03-07 Similarities in structure and function between pigs and human beings include size feeding patterns digestive physiology dietary habits kidney structure and function pulmonary vascular bed structure coronary artery distribution propensity to obesity respiratory rates tidal volumes and social behaviors Since the pig is an omnivore it provides an adaptable model to evaluate chronic and acute exposures to xenobiotics such as alcohol caffeine tobacco food additives and environmental pollutants Swine have been used successfully as models to evaluate alcoholism diabetes absorption digestion total parenteral nutrition organ transplantation atherosclerosis exercise hypertension hemorrhagic hypotension melanoma gingivitis obstructive and reflux nephropathy osteochondrosis dermal healing and septic shock A severe and

worsening shortage of organs and tissues for transplantation in patients with severe organ failure has encouraged the consideration of inter species or xenotransplantation In developing programs toward this end the pig generally is viewed as the preferred donor because of its size physiology and availability The pig harbors relatively few diseases which could be transmitted inadvertently to human patients The ability to genetically modify swine to ameliorate the consequences of the human immune response offers a further significant advantage Another important consideration for an animal model is that basic biologic background information be available for investigators to design future prospective studies
