Biomechanics in Ergonomics Shrawan Kumar, 1999-03-25 Two important goals of ergonomics are the comfort and the health and safety of workers In many ways these are mutually compatible for where health and safety is jeopardized the discomfort results Most work related injuries can be viewed as biochemical damage to a tissue or organ ultimately all injuries are sustained by tissues

Practical Soil Dynamics Milutin Srbulov, 2011-06-17

The objective of this book is to fill some of the gaps in the existing engineering codes and standards related to soil dynamics concerning issues in earthquake engineering and ground vibrations by using formulas and hand calculators The usefulness and accuracy of the simple analyses are demonstrated by their implementation to the case

histories available in the literature Ideally the users of the volume will be able to comment on the analyses as well as provide more case histories of simple considerations by publishing their results in a number of international journals and conferences The ultimate aim is to extend the existing codes and standards by adding new widely accepted analyses in engineering practice The following topics have been considered in this volume main ground motion sources and properties typical ground motions recording ground investigations and testing soil properties used in simple analyses fast sliding in non liquefied soil flow of liquefied sandy soil massive retaining walls slender retaining walls shallow foundations piled foundations tunnels vertical shafts and pipelines ground vibration caused by industry Audience This book is of interest to geotechnical engineers engineering geologists earthquake engineers and students The Electric Journal ,1927 *FOUNDATION ENGINEERING* CHATTOPADHYAY, BIKASH CHANDRA,MAITY, JOYANTA,2014-12-30 The book is primarily intended for undergraduate and postgraduate students of civil engineering It is also useful for the students of AMIE and a diploma course in civil engineering The book is planned as a text for the first course in foundation engineering and presents the principles and practices of selection and design of foundation for structures in a simple and concise manner Codal references have been given to acquaint the students with prevalent methodologies adopted in practise in the country The book provides topics of wide interest such as machine foundation foundation on problematic soil and ground improvement techniques A large number of solved examples and multiple choice questions are included to help readers for easy understanding of the principle of design and memorising important details for practical application The information contained in the book is also helpful for the scholars pursuing research study and practicing engineers confronted in the field Key Features Simple and systematic presentation of the subject matter A large number of solved and unsolved problems for practice MCQs with answers to help students appearing in competitive examinations GATE IES IAS etc Annexure for ready references in different allied engineering topics Falls and Cognition in Older Persons Manuel Montero-Odasso,Richard Camicioli,2019-10-04 Despite of the enormous efforts of researchers and clinicians to understand the pathophysiology of falls in older adults and establish preventive treatments there is still a significant gap in our understanding and treating of this challenging syndrome particularly when we focus in cognitively impaired older adults Falls in older adults are a very common yet complex medical event being the fifth leading cause of death and a main cause of insidious disability and nursing home placement in our world aging population Importantly falls in the cognitively impaired double the prevalence of the cognitively normal affecting up of 60% of older adults with low cognition and increasing the risk of injuries The past decade has witnessed an explosion of new knowledge in the role of cognitive processes into the falls mechanisms This was also accompanied with clinical trials assessing the effect of improving cognition via pharmacological and non pharmacologic approaches to prevent falls and related injuries Unfortunately this revolution in emerging interventions left a gap between clinician scientists and researchers at academic centers where the new data had been generated and the practitioners who care for cognitively

impaired patients with falls Most advances are published in specialty journals of geriatric medicine neurology and rehabilitation The aim of this book is to reduce this gap and to provide practical tools for fall prevention in cognitively impaired populations The proposed book is designed to present a comprehensive and state of the art update that covers the pathophysiology epidemiology and clinical presentation of falls in cognitively impaired older adults We additionally aim to reduce the knowledge gap in the association between cognitive processes and falls for practitioners from a translational perspective from research evidence to clinical approach We will address gaps and areas of uncertainty but also we will provide practical evidence based guidelines for the assessment approach and treatment of falls in the cognitively impaired populations This book is a unique contribution to the field Existing textbooks on fall prevention focus in global approaches and only tangentially address the cognitive component of falls and not purposely address special populations and or settings as residential care and nursing homes Due to the expected increase of proportion of older adults with cognitive and mobility impairments this book is also valuable for the whole spectrum of the health care of the elderly By including a transdisciplinary perspective from geriatric medicine rehabilitation and physiotherapy medicine cognitive neurology and public health this book will provide a practical and useful resource with wide applicability in falls assessment and prevention
