Rainfall-Induced Soil Slope Failure Lulu Zhang, Jinhui Li, Xu Li, Jie Zhang, Hong Zhu, 2018-09-03 Rainfall induced landslides are common around the world. With global climate change their frequency is increasing and the consequences are becoming greater. Previous studies assess them mostly from the perspective of a single discipline correlating landslides with rainstorms, geomorphology and hydrology in order to establish a threshold prediction value for rainfall induced landslides. Analyzing the slope's stability using a geomechanical approach or assessing the risk from field records. Rainfall Induced Soil Slope Failure Stability Analysis and Probabilistic Assessment integrates probabilistic approaches with the geotechnical modeling of slope failures under rainfall conditions with unsaturated soil. It covers theoretical models of rainfall infiltration and stability analysis, reliability analysis based on coupled hydro-mechanical modelling, stability of slopes with cracks, gravels and spatial heterogeneous soils and probabilistic model calibration based on measurement. It focuses on the uncertainties involved with rainfall induced landslides and presents state-of-the-art techniques and methods which characterize the uncertainties and quantify the probabilities and risk of rainfall induced landslide hazards. Additionally, the authors cover the failure mechanisms of rainfall induced slope failure. Commonly used infiltration and stability methods. The infiltration and stability of natural soil slopes with cracks and colluvium materials. Stability evaluation methods based on probabilistic approaches. The effect of spatial variability on unsaturated soil slopes and more. *Landmarks in Earth Reinforcement* H. Ochiai, K. Omine, J. Otani, N. Yasufuku, 2001-01-01 Earth reinforcing techniques are increasingly becoming a useful, powerful and economical solution to various problems encountered in geotechnical engineering practice. Expansion of the experiences and knowledge in this area has succeeded in developing new techniques and their applications to geotechnical engineering problems. In order to discuss the latest experiences and knowledge and with the purpose of spreading them all over the world for further development, the IS Kyushu conference series on the subject of earth reinforcement have been held in Fukuoka, Japan every four years since 1988. This fourth symposium entitled Landmarks in Earth Reinforcement is a continuation of the series IS Kyushu conferences and also aims at being one of the landmarks in the progress of modern earth reinforcement practice. The first volume contains 137 papers selected for the symposium covering almost every aspect of earth reinforcement. The second volume contains texts of the special and keynote lectures. *Soil-cement and Other Construction*
