*Vygotsky's Sociohistorical Psychology and its Contemporary Applications* Carl Ratner, 2013-06-29 The social character of psychological phenomena has never been easy to comprehend Despite the fact that an intricate set of social relations forms our most intimate thoughts feelings and actions we believe that psychology originates inside our body in genes hormones the brain and free will Perhaps this asocial view stems from the alienated nature of most societies which makes individual activity appear to be estranged from social relations One might have thought that the emergence of scientific psychology would have disclosed the social character of activity had overlooked Unfortunately a century and a half of naive experience half of psychological science has failed to comprehend the elusive social character of psychological phenomena Psychological science has evidently been subjugated by the mystifying ideology of society This book aims to comprehend the social character of psychological functioning I argue that psychological functions are quintessentially social in nature and that this social character must be comprehended if psychological knowledge and practice are to advance The social nature of psychological phenomena consists in the fact that they are constructed by individuals in the process of social interaction they depend upon properties of social interaction one of their primary purposes is facilitating social interaction and they embody the specific character of historically bound social relations This viewpoint is known as sociohistorical psychology It was articulated most profoundly and comprehensively by the Russian psychologists Lev Vygotsky and Alexander Luria during the 1920s and 1930s

**Semantic Interoperability Issues, Solutions, Challenges** Salvatore F. Pileggi, Carlos Fernandez-Llatas, 2022-09-01 Semantic technologies are experiencing an increasing popularity in the context of different domains and applications The understanding of any class of system can be significantly changed under the assumption any system is part of a global ecosystem known as Semantic Web The Semantic Web would be an evolving extension of current Web model normally referred as Syntactic Web that introduces a semantic layer in which semantics or meaning of information are formally defined So semantics should integrate web centric standard information infrastructures improving several aspects of interaction among heterogeneous systems This is because common interoperability models are progressively becoming obsolete if compared with the intrinsic complexity and always more distributed focus that feature modern systems For example the basic interoperability model that assumes the interchange of messages among systems

without any interpretation is simple but effective only in the context of close environments. Also more advanced models such as the functional interoperability model that integrates basic interoperability model with the ability of interpreting data context under the assumption of a shared schema for data fields accessing appears not able to provide a full sustainable technologic support for open systems. The Semantic Interoperability model would improve common interoperability models introducing the interpretation of means of data. Semantic interoperability is a concretely applicable interaction model under the assumption of adopting rich data models commonly called Ontology composed of concepts within a domain and the relationships among those concepts. In practice semantic technologies are partially inverting the common view at actor intelligence: intelligence is not implemented only by actors but it is implicitly resident in the knowledge model. In other words, schemas contain information and the code to interpretate it.
