their discipline and examine the role of parents in addressing the impacts of watching violent TV programs upon their children. Results indicate that most secondary school children watch violent TV programs at home in the sitting rooms. They spend an average of three hours per day on weekdays and seven and half hours on weekends watching movies, music, drama, and informational programs that were identified as the most violent ones. Obviously, spending lots of time watching violent TV programs decreases children's academic performance and discipline. This book is important because it discusses the parents' role in discouraging and limiting children from watching violent TV programs and choosing appropriate TV programs for them.

**Eyewitness Memory** Charles P. Thompson, Douglas J. Herrmann, J. Don Read, Darryl Bruce, David G. Payne, 2014-03-05

The organization of the first Society for Applied Research in Memory and Cognition (SARMAC) conference centered around two specifically identifiable research topics: autobiographical memory and eyewitness memory. These two areas, long time staples on the menu of investigators of memory, in more natural settings differ on a variety of dimensions, perhaps most notably on their specific goals for scientific inquiry and application. For many questions about memory and cognition that are of interest to scientific psychology, there have been historical as well as rather arbitrary reasons for their assignment to the autobiographical or eyewitness memory fields. Perhaps as a result of differing historical orientations, the first volume's seven autobiographical memory chapters focus upon the qualities or types of recall from research participants, whereas the seven chapters in the eyewitness memory volume generally focus upon the quantity, a concern for completeness and accuracy of recall. This interest in the ultimate end product and its application within the legal process in general encourages eyewitness memory investigators to modify their testing procedures continually in an attempt to gain even more information from participants about an event. Indeed, several of the eyewitness memory chapters reflect such attempts. Beyond the specific contributions of each chapter to the literature on autobiographical and eyewitness memory, the editors hope that the reader will come away with some general observations: the autobiographical and eyewitness memory fields are thriving; these two fields are likely to remain center stage in the further investigation of memory in natural contexts; although the autobiographical and eyewitness memory chapters have been segregated in these two volumes, the separation is often more arbitrary than real, and connections between the two areas abound; the two research traditions are entirely mindful of fundamental laboratory methods research and theory, sometimes drawing their research inspirations from that quarter; and the two fields, though driven largely by everyday memory concerns, can contribute to a more basic understanding of memory at both an empirical and a theoretical level.

Youth Development in Identity Societies James E. Cote,2018-10-31 This book explores the causes and consequences of the contradictions in young people s lives stemming from the affluence purpose paradox a lack of purpose in life among many of those living in the most affluent societies in human history This paradox is endemic to identity societies where people experience a choice contingent life course and is examined using an interdisciplinary approach largely with an integration of developmental psychology and sociology but also using historical anthropological economic and political perspectives The transition to adulthood is now commonly a prolonged process with young people facing a number of psychological challenges and sociological obstacles in their identity formation Challenges include difficulties in making prudent choices about goals Obstacles involve cross pressures in the wider society as well as in educational institutions Consequently many youth experience their education as alienating and stressful rather than as an opportunity for personal development Those without a sense of purpose have more difficulties with their identity formation that can produce symptoms of anxiety and depression The current student mental health crisis is examined in this context An additional challenge is an ambiguously defined adulthood Young people who are confused about appropriate adult roles often value hedonistic activities rooted in narcissism and materialism rather than in more fulfilling long term goals Conversely those who are agentic in their personal development can thrive in adulthood especially when they combine agency with generativity This book ends with a series of recommendations for researchers and policy makers to help youth cope with the affluence purpose paradox     *Medical Books and Serials in Print* ,1983     **Current Catalog** National Library of Medicine (U.S.),1983 First multi year cumulation covers six years 1965 70
