Socializing Epistemology The Social Dimensions Of Knowledge:

Socializing Epistemology Frederick F. Schmitt, 1994 In this wide ranging collection of never before published essays distinguished scholars in the fields of philosophy and economics examine such questions as whether testimony is a basic source of knowledge the degree to which notions of a good argument are determined by speakers and their audiences the role of individual biases in the development of science and the social aspects of group belief and group justification The collection ends with the first comprehensive bibliography of social epistemology *Analyzing Social Knowledge* Angelo J. Corlett, 1996-10-17 *Analyzing Social Knowledge* argues for both socialized and naturalized epistemology J Angelo Corlett takes social epistemology in a new direction applying the findings of experimental cognitive psychology to theories of social knowledge Corlett analyzes social knowlegde in terms of group belief individual belief truth justification coherence and reliability and responsibility He provides a critique of leading theories of social knowledge and defends his analysis against respected criticisms of naturalized epistemology The far reaching implications of *Analyzing Social Knowledge* will interest epistemologists philosophers of the mind and cognitive psychologists **Knowledge as a Feeling** Troy A.

Swanson, 2023-05-08 Much of information science theory assumes a type of rationality in how individuals process the world around them but the impact of misinformation and disinformation along with the polarization of society into competing information factions calls for new understandings around our relationships to information Advances in neuroscience and psychology shed new light on how the brain processes information using both conscious and unconscious systems Current theory in neuroscience emphasizes that the mind is not a unified whole but a network of networks constructing reality to anticipate needs Knowledge is not a rational process but centers around the feeling of knowing which is the net output of competing brain processes The feeling of knowing assumes a group context and offers a social epistemological stance that judges knowledge within this group context With knowledge built into groups power dynamics allow work to be accomplished but also privilege some group members over others The feeling of knowing has significant implications for information science challenging theoreticians and practitioners to reconsider how individuals process information For information behavior the feeling of knowing offers a fuller picture looking at conscious and unconscious processing in the production of knowledge For information literacy the feeling of knowing sheds light on how individuals evaluate information and synthesize new sources into their existing knowledge Ultimately the feeling of knowing leads us toward new reflective and metacognitive tools that help meet this moment in the evolution of our information ecosystem This book explores the idea that knowing is a feeling that results from the interactions of the brain's unconscious and conscious processes and not through the accumulation of facts It's intended to help librarians educators and information scientists better understand what neuroscience and psychology are teaching about what it means to know and how our brain learns The Routledge Companion to Philosophy of Social Science Lee McIntyre, Alex Rosenberg, 2016-12-08 37 Why Is There No Philosophy of

development of virtue theoretic approaches in epistemology There have been four single authored book length treatments of issues of virtue epistemology over the last seven years beginning with Ernest Sosa's *Knowledge in Perspective* Cambridge 1991 and extending to Linda Zagzebski's *Virtue of the Mind* Cambridge 1996 Weighing in with Jonathan Kvanvig's *The Intellectual Virtues and the Life of the Mind* 1992 and James Montmarquet's *Epistemic Virtue and Doxastic Responsibility* 1993 Rowman Littlefield has had a particularly strong interest in the direction and growth of the field To date there has been no collection of articles directly devoted to the growing debate over the possibility and potential of a virtue epistemology This volume exists in the belief that there is now a timely opportunity to gather together the best contributions of the influential authors working in this growing area of epistemological research and to create a collection of essays as a useful course text and research source Several of the articles included in the volume are previously unpublished Several essays discuss the range and general approach of virtue theory in comparison with other general accounts What advantages are supposed to accrue from a virtue based account in epistemology in handling well known problems such as Gettier and Evil Genie type problems Can reliabilist virtue epistemology handle skeptical challenges more satisfactorily than non virtue centered forms of epistemic reliabilism Others provide a needed discussion of relevant analogies and disanalogies between ethical and epistemic evaluation The readings all contribute

The Fate of Knowledge Helen E. Longino, 2018-06-05

Helen Longino seeks to break the current deadlock in the ongoing wars between philosophers of science and sociologists of science academic battles founded on disagreement about the role of social forces in constructing scientific knowledge While many philosophers of science downplay social forces claiming that scientific knowledge is best considered as a product of cognitive processes sociologists tend to argue that numerous noncognitive factors influence what scientists learn how they package it and how readily it is accepted Underlying this disagreement however is a common assumption that social forces are a source of bias and irrationality Longino challenges this assumption arguing that social interaction actually assists us in securing firm rationally based knowledge This important insight allows her to develop a durable and novel account of scientific knowledge that integrates the social and cognitive Longino begins with a detailed discussion of a wide range of contemporary thinkers who write on scientific knowledge clarifying the philosophical points at issue She then critically analyzes the dichotomous understanding of the rational and the social that characterizes both sides of the science studies stalemate and the social account that she sees as necessary for an epistemology of science that includes the full spectrum of cognitive processes Throughout her account is responsive both to the normative uses of the term knowledge and to the social conditions in which scientific knowledge is produced Building on ideas first advanced in her influential book *Science as Social Knowledge* Longino brings her account into dialogue with current work in social epistemology and science studies and shows how her critical social approach can help solve a variety of stubborn problems While the book focuses on epistemological concerns related to the sociality of inquiry Longino also takes up its implications for scientific pluralism The social approach she

concludes best allows us to retain a meaningful concept of knowledge in the face of theoretical plurality and uncertainty

Social Empiricism Miriam Solomon, 2007-01-26 For the last forty years two claims have been at the core of disputes about scientific change that scientists reason rationally and that science is progressive For most of this time discussions were polarized between philosophers who defended traditional Enlightenment ideas about rationality and progress and sociologists who espoused relativism and constructivism Recently creative new ideas going beyond the polarized positions have come from the history of science feminist criticism of science psychology of science and anthropology of science Addressing the traditional arguments as well as building on these new ideas Miriam Solomon constructs a new epistemology of science After discussions of the nature of empirical success and its relation to truth Solomon offers a new social account of scientific rationality She shows that the pursuit of empirical success and truth can be consistent with both dissent and consensus and that the distinction between dissent and consensus is of little epistemic significance In building this social epistemology of science she shows that scientific communities are not merely the locus of distributed expert knowledge and a resource for criticism but also the site of distributed decision making Throughout she illustrates her ideas with case studies from late nineteenth and twentieth century physical and life sciences Replacing the traditional focus on methods and heuristics to be applied by individual scientists Solomon emphasizes science funding administration and policy One of her goals is to have a positive influence on scientific decision making through practical social recommendations

Reflection,

Science and the Virtues Tony Gibbons, 2009-01-01 The word reflect appears in curriculum documents in texts in proposals and in plans No proposal appears complete without the word To reflect is evidently a good thing but what does it mean It is not just being reasonable Without a grasp of what it means to reflect how is it possible to implement the proposals and plans This book tackles the problem of what it is to reflect In doing so it examines the importance of reflection for a flourishing human being and its place in two major areas of human thought and education science and ethics Science is essentially a reflective activity and the teaching and development of science must acknowledge this The acquisition and practice of the virtues is also essentially a reflective activity as is evident in both the Aristotelian and the Confucian traditions To be prudent for instance is to be reflective The teaching of science and the learning of the virtues depend upon the development of the capacity to reflect Reflection appears to be an activity that is distinctive of human beings This book will be of interest to teachers and those responsible for the administration and development of education whether it be primary secondary or tertiary It also has something to say to anyone who is responsible for planning for the future And as we all do that it has something to say to all of us Tony Gibbons is an adjunct Senior Lecturer at the University of South Australia After teaching science and mathematics in UK secondary schools he trained teachers at Colleges in the UK before moving to South Australia where he taught Philosophy Having qualified in law he appeared as a barrister in refugee cases both in Australia and overseas during the 1990s before returning to Philosophy in particular virtue ethics

Perspectives on Ignorance from Moral and Social Philosophy Rik Peels, 2016-06-23 This edited collection focuses on the moral and social dimensions of ignorance an undertheorized category in analytic philosophy Contributors address such issues as the relation between ignorance and deception ignorance as a moral excuse ignorance as a legal excuse and the relation between ignorance and moral character In the moral realm ignorance is sometimes considered as an excuse some specific kind of ignorance seems to be implied by a moral character and ignorance is closely related to moral risk Ignorance has certain social dimensions as well it has been claimed to be the engine of science it seems to be entailed by privacy and secrecy and it is widely thought to constitute a legal excuse in certain circumstances Together these contributions provide a sustained inquiry into the nature of ignorance and the pivotal role it plays in the moral and social domains

study of collective intentionality *Climate Technology, Gender, and Justice* Tina Sikka,2018-12-14 This book is the first to undertake a gendered analysis of geoengineering and alternative energy sources Are either of these technologies sufficiently attendant to gender issues Do they incorporate feminist values as articulated by the renowned social philosopher Helen Longino such as empirical adequacy novelty heterogeneity complexity and applicability to human needs The overarching argument in this book contends that while mitigation strategies like solar and wind energy go much further to meet feminist objectives and virtues geoengineering is not consistent with the values of justice as articulated in Longino s feminist approach to science This book provides a novel feminist argument in support of pursuing alternative energy in the place of geoengineering It provides an invaluable contribution for academics and students working in the areas of gender science and climate change as well as policy makers interested in innovative ways of taking up climate change mitigation and gender

From Trust to Trustworthiness Maria Baghramian,2020-05-21 Trust is an essential component of social life and yet political polarization and social tensions can easily lead to its erosion The articles collected in this volume throw a new light on the fundamentals of trust and trustworthiness and thus help us understand better the conditions and the limits of trust The book brings together some of the best recent thinking on trust from across a broad spectrum of approaches and concerns The essays range from the more abstract discussions of the conditions and nature of trust to its application to our social and political lives in general alongside more subject specific approaches such as trust in the media Trust is a thick concept with both epistemic and normative content and significance and several chapters engage with the ethical features of trust in distinct ways and also show the central role of trust in our decision making There is also an engagement with the phenomenological approach of Husserl in conjunction with Margaret Gilbert s theory of political obligation The final chapter by Onora O Neill one of the pioneers of the discussions of trust and trustworthiness in recent philosophy links the topic of trust to the central issue of the conditions of trustworthiness Given the paramount significance of the exercise of trust in our daily lives this book will be of interest to philosophers and non philosophers alike This book was originally published as a special issue of the International Journal of Philosophical Studies Learning from Words Jennifer Lackey,2008-02-28 Jennifer Lackey reshapes the vigorous current debate on testimony by showing that the standard view of the transmission of knowledge by testimony is fundamentally misguided Her radical new theory holds that testimony is itself an irreducible source of new knowledge to which both speaker and hearer contribute
