Sociobiology And Bioeconomics The Theory Of Evolution In Biological And Economic Theory:

Sociobiology and Bioeconomics Peter Koslowski, 2013-03-09 The theory of evolution and Neo Darwinian biological theory extend their analysis in sociobiology from the life sciences and the animal societies to human societies Sociobiology as a unifying theory of the social interaction within and between species has led to an integration of economic analysis into biology The economy of nature has become the subject of bioeconomics which in turn transferred biological analysis to the human economy Evolution competition selection and cooperation are phenomena common to the economy of nature and human economy The inclusion of economic and cultural theory in evolution theory raises the question whether the Neo Darwinian Synthesis with its exclusive concern with somatic heredity is able to incorporate developmental systems of the human economy and of cultural heredity A new synthesis of the natural and the social sciences is in the making

Genetic Explanations Sheldon Krinsky, Jeremy Gruber, 2013-02-26 No longer viewed by scientists as the cell's fixed master molecule DNA is a dynamic script that is ad libbed at each stage of development What our parents hand down to us is just the beginning Genetic Explanations urges us to replace our faith in genetic determinism with scientific knowledge about genetic plasticity and epigenetic inheritance

The Principles of Life Tibor Ganti, 2003-09-18 Beginning with a new essay Levels of Life and Death Tibor Ganti develops three general arguments about the nature of life In The Nature of the Living State Professor Ganti answers Francis Crick's puzzles about life itself offering a set of reflections on the parameters of the problems to be solved in origins of life research and more broadly in the search for principles governing the living state in general The Principle of Life describes in accessible language Ganti's chief insight about the organization of living systems his theory of the chemoton or chemical automaton The simplest chemoton model of the living state consists of three chemically coupled subsystems an autocatalytic metabolism a genetic molecule and a membrane Ganti offers a fresh approach to the ancient problem of life criteria articulating a basic philosophy of the units of life applicable to the deepest theoretical considerations of genetics chemical synthesis evolutionary biology and the requirements of an exact theoretical biology New essays by E. Szathmari and James Griesemer on the biological and philosophical significance of Ganti's work of thirty years indicate not only the enduring theoretical significance but also the continuing relevance and heuristic power of Ganti's insights New endnotes by Szathmari and Griesemer bring this legacy into dialogue with current thought in biology and philosophy Ganti's chemoton model reveals the fundamental importance of chemistry for biology and philosophy Ganti's technical innovation cycle stoichiometry at once captures the fundamental fact that biological systems are organized in cycles and at the same time offers a way to understand what it is to think chemically Perhaps most fundamentally Ganti's chemoton model avoids dualistic thinking enforced by the dichotomies of modern biology germ and soma gene and character genotype and phenotype

The Oxford Handbook of Developmental Psychology, Vol. 1 Philip David Zelazo, 2013-03-21 This handbook provides a comprehensive survey of what is now known about psychological development from birth to biological

maturity and it highlights how cultural social cognitive neural and molecular processes work together to yield human behavior and changes in human behavior

The Oxford Handbook of Developmental Psychology, Vol. 1 Philip David Zelazo, 2013-01-15 Research in developmental psychology which examines the history origins and causes of behavior and age related changes in behavior seeks to construct a complex multi level characterization of behavior as it unfolds in time across a range of time scales from the milliseconds of reaction time to the days and weeks of childhood the decades of the human lifespan and even beyond to multiple generations Behavior in this view is embedded within what is essentially a dynamic system of relations extending deep within individuals Thorough and engaging this handbook explores the impact of this research on what is now known about psychological development from birth to biological maturity and it highlights the extent to which the most cutting edge developmental science reflects a new kind of intellectual synthesis one that reveals how cultural social cognitive neural and molecular processes work together to yield human behavior and changes in human behavior With insightful contributions from more than 50 of the world s leading developmental scientists these two volumes will serve as an influential and informed text for students and as an authoritative desk reference for years to come

The Ontogeny of Information Susan Oyama, 2000-03-16 In this work the author attempts to complicate certain conventional dichotomies particularly the nature

nurture split that she believes impede scientific inquiry and thought about individual development and to untangle the often subtle assumptions embedded in the **Epigenetics and Human Health** Alexander Haslberger, Sabine Greßler, 2011-08-24 After first introducing the concept of epigenetics this handbook and ready reference provides an overview of the main research on epigenetics It adopts a multidisciplinary approach involving molecular biology molecular epidemiology and nutritional science with a special focus of the book is on disease prevention and treatment Of interest to all healthcare related professionals as well as nutritionists and the medical community focusing on disease prevention

The Dependent Gene David S. Moore, 2003-02-05 This book provides an analysis of the nature vs nurture debate arguing for an end to the either/or nature of the discussions in favor of a recognition that environmental and genetic factors interact throughout life to form human traits

Genes in Development Eva M. Neumann-Held, Christoph Rehmann-Sutter, 2006-01-27 Explores the debate on the biological significance and cultural meaning of genes in the development of organisms the molecular paradigm

No God, No Science Michael Hanby, 2016-11-30 No God No Science Theology Cosmology Biology presents a work of philosophical theology that retrieves the Christian doctrine of creation from the distortions imposed upon it by positivist science and the Darwinian tradition of evolutionary biology Argues that the doctrine of creation is integral to the intelligibility of the world Brings the metaphysics of the Christian doctrine of creation to bear on the nature of science Offers a provocative analysis of the theoretical and historical relationship between theology metaphysics and science Presents an original critique and interpretation of the philosophical meaning of Darwinian biology

Where Biology Meets Psychology Valerie Gray Hardcastle, 1999 A great deal of interest and excitement surround the interface between the philosophy of biology and the philosophy of psychology yet the area is neither well defined nor well represented in mainstream philosophical publications This book is perhaps the first to open a dialogue between the two disciplines Its aim is to broaden the traditional subject matter of the philosophy of biology while informing the philosophy of psychology of relevant biological constraints and insights The book is organized around six themes functions and teleology evolutionary psychology innateness philosophy of mind philosophy of science and parallels between philosophy of biology and philosophy of mind Throughout one finds overlapping areas of study larger philosophical implications and even larger conceptual ties Woven through these connections are shared concerns about the status of semantics scientific law evolution and adaptation and cognition in general Contributors Andr Ariew Mark A Bedau David J Buller Paul Sheldon Davies Stephen M Downes Charbel Nino El Hani Owen Flanagan Peter Godfrey-Smith Todd Grantham Valerie Gray Hardcastle Gary Hatfield Daniel W McShea Karen Neander Shaun Nichols Antonio Marcos Pereira Tom Polger Lawrence A Shapiro Kim Sterelny Robert A Wilson William C Wimsatt

The Concept of the Gene in Development and Evolution Peter J. Beurton, Raphael Falk, Hans-Jörg Rheinberger, 2000-05-29 Advances in molecular biological research in the latter half of the twentieth century have made the story of the gene vastly complicated the more we learn about genes the less sure we are of what a gene really

is Knowledge about the structure and functioning of genes abounds but the gene has also become curiously intangible This collection of essays renews the question what are genes Philosophers historians and working scientists re evaluate the question in this volume treating the gene as a focal point of interdisciplinary and international research It will be of interest to professionals and students in the philosophy and history of science genetics and molecular biology Changing Stocks, Flows and Behaviors in Industrial Ecosystems Matthias Ruth, Brynhildur Davidsdottir, 2009-01-01 This book marks an important contribution by Matthias Ruth and Brynhildur Davidsdottir to the developing literature that seeks to integrate our understanding of physical and environmental systems the built human environment economics and complexity It is a valuable resource for anyone interested in industrial ecology material flow assessment and the state of the world generally Braden R Allenby Arizona State University US This volume offers the state of the art in dynamic modeling of the functioning of firms in industrial ecosystems The systematic connection between insights from engineering ecological behavioral and organization theories makes the insights policy relevant The authors combine an impressive knowledge of innovative concepts and modeling techniques with data on real world industrial ecosystems Jeroen van den Bergh Free University Amsterdam The Netherlands Industrial ecology provides a consistent material and energetic description of human production and consumption processes in the larger context of environmental and socioeconomic change The contributors to this book offer methodologies for such descriptions focusing on the dynamics associated with stocks of materials and capital flows of raw materials intermediate products desired outputs and wastes as well as the associated changes in behaviors of producers consumers and institutions The book begins by presenting analogies and analytical concepts pertinent to understanding the dynamics of industrial ecosystems and offers a reflection on the use of those analogies and concepts their limitations and potential extensions Part II focuses on stocks and flows dynamics at the firm and industry level Part III turns to the use of agent based modeling and organization behavior theory to better understand and represent the dynamics within firms and the larger institutional environment within which they choose to use materials energy and technology Connections are made throughout between those dynamics and the associated changes in environmental quality The concluding chapter addresses how to change a firm s environmental performance from within Researchers and students in the fields of industrial ecology resource and environmental economics ecological economics environmental energy and climate change policy environmental engineering and energy economics will find this comprehensive volume highly informative Jakob von Uexküll and Philosophy Francesca Micheli, Kristian Köchy, 2019-12-09 Dismissed by some as the last of the anti Darwinians his fame as a rigorous biologist even tainted by an alleged link to National Socialist ideology it is undeniable that Jakob von Uexküll 1864-1944 was eagerly read by many philosophers across the spectrum of philosophical schools from Scheler to Merleau Ponty and Deleuze and from Heidegger to Blumenberg and Agamben What has then allowed his name to survive the misery of history as well as the usually fatal gap between science and humanities This collection of essays attempts for the first time to

do justice to Uexküll's theoretical impact on Western culture By highlighting his importance for philosophy the book aims to contribute to the general interpretation of the relationship between biology and philosophy in the last century and explore the often neglected connection between continental philosophy and the sciences of life Thanks to the exploration of Uexküll's conceptual legacy the origins of cybernetics the overcoming of metaphysical dualisms and a refined understanding of organisms appear variedly interconnected Uexküll's background and his relevance in current debates are thoroughly examined as to appeal to undergraduate and postgraduate students as well as postdoctoral researchers in fields such as history of the life sciences philosophy of biology critical animal studies philosophical anthropology biosemiotics and biopolitics Robert Spaemann's Philosophy of the Human Person Holger Zaborowski, 2010-02-04 An analysis of the most important features of Robert Spaemann's philosophy Holger Zaborowski demonstrates the importance of Spaemann's contribution to a number of contemporary debates in philosophy and theology and explains the unity of his thought

Biological Information: New Perspectives - Proceedings Of The Symposium John C Sanford, Robert J Marks II, Michael J Behe, William A Dembski, Bruce L Gordon, 2013-06-03 In the spring of 2011 a diverse group of scientists gathered at Cornell University to discuss their research into the nature and origin of biological information This symposium brought together experts in information theory computer science numerical simulation thermodynamics evolutionary theory whole organism biology developmental biology molecular biology genetics physics biophysics mathematics and linguistics This volume presents new research by those invited to speak at the conference The contributors to this volume use their wide ranging expertise in the area of biological information to bring fresh insights into the many explanatory difficulties associated with biological information These authors raise major challenges to the conventional scientific wisdom which attempts to explain all biological information exclusively in terms of the standard mutation selection paradigm Several clear themes emerged from these research papers 1 Information is indispensable to our understanding of what life is 2 Biological information is more than the material structures that embody it 3 Conventional chemical and evolutionary mechanisms seem insufficient to fully explain the labyrinth of information that is life By exploring new perspectives on biological information this volume seeks to expand encourage and enrich research into the nature and origin of biological information The Cambridge Companion to the Philosophy of Biology David L. Hull, Michael Ruse, 2007-10-01 The philosophy of biology is one of the most exciting new areas in the field of philosophy and one that is attracting much attention from working scientists This Companion edited by two of the founders of the field includes newly commissioned essays by senior scholars and up and coming younger scholars who collectively examine the main areas of the subject the nature of evolutionary theory classification teleology and function ecology and the problematic relationship between biology and religion among other topics Up to date and comprehensive in its coverage this unique volume will be of interest not only to professional philosophers but also to students in the humanities and researchers in the life sciences and related areas of inquiry **The**

Theory of Capitalism in the German Economic Tradition Peter Koslowski, 2013-11-11 The theory of capitalism and of the economic order is the central topic of the German economic tradition in the 20th century Capitalism has not only been the topic for Marxist economics and for the Frankfurt School but also for the Historical School and for the postmarxist theory of capitalism in Ordo and Neo Liberalism as well as in Solidarism The question of the foundations of the economic order of the market economy and of capitalism as well as the problem whether a third path between capitalism and socialism is possible occupied this tradition from the Historical School to Ordo Liberalism and the theory of the social market economy The theory of capitalism and of the social market economy as well as the critique and reform developed in this theoretical tradition is important for the theory of economic systems as well as for today's problems of the economic order Its relevance for the present world economy is visible in the discussions whether there exist different models of capitalism and whether they can be described as the Anglo American and as the Rhenish model of capitalism influenced by the thought of the German economic tradition Michel Albert the author of this classification gave the key word in his book Capitalism against Capitalism The papers of this book can help to clarify this debate by giving a first hand introduction to some of the main economic thinkers of capitalism
