Symbiotic Stars:

Highly Evolved Close Binary Stars Anatoliĭ Mikhaĭlovich Cherepashchuk, 1996 **Variable Stars and Stellar Evolution** Vicki E. Sherwood, L. Plaut, 1975-07-31 Proceedings of IAU Symposium No 67 held in Moscow U S S R July 29 August 4 1974 **The Symbiotic Stars** S. J. Kenyon, 1986-12-18 Dr Kenyon has researched and assembled here all the existing data for the known symbiotic stars in which a dwarf star accretes material from its red giant companion In this book he summarises observational material covering the eruptive and quiescent phases of these objects and emphasises the important astrophysical problems raised and resolved by results at infrared optical radio ultraviolet and X ray wavelengths Physical models for the eruptive and quiescent phases and the long term evolution of symbiotic stars are discussed with the goal of developing observational diagnostics that serve to test the basic theories The book concludes with a detailed appendix and bibliography that will aid researchers interested in the history of individual symbiotic systems and confirm this volume as an indispensable handbook at any observatory where research on stellar objects is undertaken *Symbiotic Stars Probing Stellar Evolution* Romano L. M. Corradi, Joanna Mikolajewska, T. J. Mahoney, 2003 **Evolution of Peculiar Red Giant Stars** International Astronomical Union. Colloquium, 1989-06-22 Red giant stars are evolutionarily advanced objects in the closing stages of their nuclear burning lifetime Observed with increasing spectral coverage they display a variety of unusual phenomena Many are characterized by peculiar non solar surface chemical compositions which provide otherwise unobtainable clues to interior nucleosynthesis mixing and evolution Others may have received their chemical peculiarities by mass transfer from a companion This book reports on the proceedings of the International Astronomical Union Colloquium 106 It contains discussions on many aspects of these stars combining theory and observation to interpret these objects in terms of their evolutionary history There are 20 review papers 69 abstracts and short contributed papers and a complete transcript of the valuable summary panel discussion Professional astronomers will find this book useful as a reference work which incorporates current research on the modelling and evolution of these unstable stars **The Realm of Interacting Binary Stars** J. Sahade, G.E. McCluskey, Y. Kondo, 2012-12-06 More than two centuries have elapsed since the story of the interacting binary stars began with the rediscovery of the variability of Algol by John Goodricke and the interpretation he proposed for explaining the regular periodic brightness variations which he found Over this long span of time our knowledge about these systems has been growing and we have now reached a fairly good understanding of the structure and behavior of this interesting group of objects This book contains a timely summary of our present knowledge of interacting binary stars The chapters have been written by distinguished scientists who have done relevant research in the field of interacting binary stars Pulsating Stars Márcio Catelan, Horace A. Smith, 2015-03-23 This book surveys our understanding of stars which change in brightness because they pulsate Pulsating variable stars are keys to distance scales inside and beyond the Milky Way galaxy They test our understanding not only of stellar pulsation theory but also of stellar structure and evolution theory

Moreover pulsating stars are important probes of the formation and evolution of our own and neighboring galaxies Our understanding of pulsating stars has greatly increased in recent years as large scale surveys of pulsating stars in the Milky Way and other Local Group galaxies have provided a wealth of new observations and as space based instruments have studied particular pulsating stars in unprecedented detail

Radio Stars R. Hjellming, David M. Gibson, 2012-12-06 This book is the proceedings of a workshop on stellar continuum radio astronomy that was held in Boulder Colorado on August 8-10 1984 Although it was originally intended to be a small workshop with participants mainly from North America it evolved to a workshop with 72 participants from twelve countries U S A 52 Canada 3 the Netherlands 3 United Kingdom 3 Australia 2 Ireland 2 Italy 2 France 1 Mexico 1 Switzerland 1 West Germany 1 and U S S R 1 This workshop was sponsored by the Joint Institute of Laboratory Astrophysics JILA and the University of Colorado In order to preserve a workshop atmosphere while still presenting both extensive reviews and contributed papers an experimental format was adopted All contributed papers related to the topics of the day were presented in poster form in the early morning and were accessible all day During each morning or afternoon session review papers were presented followed by a coffee break in the poster area adjacent to the conference room Then the review papers and contributed papers were discussed for roughly one and a half hours The last session was devoted to invited panel papers and discussion of current and future problems in the field of stellar radio astronomy

The Analysis of Starlight John B. Hearnshaw, 2014-03-17 A reference for astronomers and historians on astronomical spectroscopy from the discovery of spectral lines through to the year 2000

The Impact of Binary Stars on Stellar Evolution Giacomo Beccari, Henri M. J. Boffin, 2019-04-18 Stars are mostly found in binary and multiple systems with at least 50% of all solar like stars having companions this fraction approaches 100% for the most massive stars A large proportion of these systems interact and alter the structure and evolution of their components leading to exotic objects such as Algol variables blue stragglers and other chemically peculiar stars but also to phenomena such as non spherical planetary nebulae supernovae and gamma ray bursts While it is understood that binaries play a critical role in the Initial Mass Function the interactions among binary systems significantly affect the dynamical evolution of stellar clusters and galaxies This interdisciplinary volume presents results from state of the art models and observations aimed at studying the impact of binaries on stellar evolution in resolved and unresolved populations Serving as a bridge between observational and theoretical astronomy it is a comprehensive review for researchers and advanced students of astrophysics
