Symplectic and Contact Topology Y. Eliashberg, Boris A. Khesin, François Lalonde, 2003-01-01 The papers presented in this volume are written by participants of the Symplectic and Contact Topology Quantum Cohomology and Symplectic Field Theory symposium The workshop was part of a semester long joint venture of The Fields Institute in Toronto and the Centre de Recherches Mathématiques in Montreal The twelve papers cover the following topics Symplectic Topology the interaction between symplectic and other geometric structures and Differential Geometry and Topology The Proceeding concludes with two papers that have a more algebraic character One is related to the program of Homological Mirror Symmetry the author defines a category of extended complex manifolds and studies its properties The subject of the final paper is Non commutative Symplectic Geometry in particular the structure of the symplectomorphism group of a non commutative complex plane The in depth articles make this book a useful reference for graduate students as well as research mathematicians

Contact and Symplectic Topology Frédéric Bourgeois, Vincent Colin, András Stipsicz, 2014-03-10 Symplectic and contact geometry naturally emerged from the mathematical description of classical physics The discovery of new rigidity phenomena and properties satisfied by these geometric structures launched a new research field worldwide The intense activity of many European research groups in this field is reflected by the ESF Research Networking Programme Contact And Symplectic Topology CAST The lectures of the Summer School in Nantes June 2011 and of the CAST Summer School in

Budapest July 2012 provide a nice panorama of many aspects of the present status of contact and symplectic topology The notes of the minicourses offer a gentle introduction to topics which have developed in an amazing speed in the recent past These topics include 3 dimensional and higher dimensional contact topology Fukaya categories asymptotically holomorphic methods in contact topology bordered Floer homology embedded contact homology and flexibility results for Stein manifolds

An Introduction to Contact Topology Hansjörg Geiges, 2008-03-13 This text on contact topology is a comprehensive introduction to the subject including recent striking applications in geometric and differential topology Eliashberg's proof of Cerf's theorem via the classification of tight contact structures on the 3 sphere and the Kronheimer Mrowka proof of property P for knots via symplectic fillings of contact 3 manifolds Starting with the basic differential topology of contact manifolds all aspects of 3 dimensional contact manifolds are treated in this book One notable feature is a detailed exposition of Eliashberg's classification of overtwisted contact structures Later chapters also deal with higher dimensional contact topology Here the focus is on contact surgery but other constructions of contact manifolds are described such as open books or fibre connected sums This book serves both as a self contained introduction to the subject for advanced graduate students and as a reference for researchers [Perspectives on Noncommutative Geometry](#) Masoud Khalkhali, 2011 This volume represents the proceedings of the Noncommutative Geometry Workshop that was held as part of the thematic program on operator algebras at the Fields Institute in May 2008 Pioneered by Alain Connes starting in the late 1970s noncommutative geometry was originally inspired by global analysis topology operator algebras and quantum physics Its main applications were to settle some long standing conjectures such as the Novikov conjecture and the Baum Connes conjecture Next came the impact of spectral geometry and the way the spectrum of a geometric operator like the Laplacian holds information about the geometry and topology of a manifold as in the celebrated Weyl law This has now been vastly generalized through Connes notion of spectral triples Finally recent years have witnessed the impact of number theory algebraic geometry and the theory of motives and quantum field theory on noncommutative geometry Almost all of these aspects are touched upon with new results in the papers of this volume This book is intended for graduate students and researchers in both mathematics and theoretical physics who are interested in noncommutative geometry and its applications *Mathematical Reviews*, 2007

New Perspectives in Mathematical Biology Society for Mathematical Biology. Conference, 2010 In the 21st century the interdisciplinary field of mathematical biology and medicine has firmly taken center stage as one of the major themes of modern applied mathematics with strong links to the empirical biomedical sciences New Perspectives in Mathematical Biology provides an overview of the distinct variety and diversity of current research in the field In every chapter of this book which covers themes ranging from cancer modeling to infectious diseases to orthopaedics and musculoskeletal tissue mechanics there is clear evidence of the strong connections and interactions of mathematics with the biological and biomedical sciences that have spawned new models and novel insights **Floer Cohomology and Flips** François
