S. Monin,A. M. Yaglom,2013-07-25 If ever a field needed a definitive book it is the study of turbulence if ever a book on turbulence could be called definitive it is this book Science Written by two of Russia s most eminent and productive scientists in turbulence oceanography and atmospheric physics this two volume survey is renowned for its clarity as well as its comprehensive treatment The first volume begins with an outline of laminar and turbulent flow The remainder of the book treats a variety of aspects of turbulence its statistical and Lagrangian descriptions shear flows near surfaces and free turbulence the behavior of thermally stratified media and diffusion Volume Two continues and concludes the presentation Topics include spectral functions homogeneous fields isotropic random fields isotropic turbulence self preservation hypotheses spectral energy transfer the Millionshchikov hypothesis acceleration fields equations for higher moments and the closure problem and turbulence in a compressible fluid Additional subjects include general concepts of the local structure of turbulence at high Reynolds numbers the theory of fully developed turbulence the propagation of electromagnetic and acoustic waves through a turbulent medium and the twinkling of stars The book closes with a discussion of the functional formulation of the problem of turbulence presenting the equations

Zech, 2013-11-11 Astronomy and Astrophysics Abstracts which has appeared in semi annual volumes since 1969 is devoted to the recording summarizing and indexing of astronomical publications throughout the world It is prepared under the auspices of the International Astronomical Union according to a resolution adopted at the 14th General Assembly in 1970 Astronomy and Astrophysics Abstracts aims to present a comprehensive documentation of literature in all fields of astronomy and astrophysics Every effort will be made to ensure that the average time interval between the date of receipt of the original literature and publication of the abstracts will not exceed eight months This time interval is near to that achieved by monthly abstracting journals compared to which our system of accumulating abstracts for about six months offers the advantage of greater convenience for the user Volume 12 contains literature published in 1974 and received before March 15 1975 some older literature which was received late and which is not recorded in earlier volumes is also included Beginning with volume 11 some minor changes of our classification scheme have been made We acknowledge with thanks contributions to this volume by Dr J Bouska who surveyed journals and publications in the Czech language and supplied us with abstracts in English and by the Commonwealth Scientific and Industrial Research Organization CSIRO Sydney for providing titles and abstracts of papers on radio astronomy

Göbel, L. Lady, A. Mader, 2013-11-11 A conference on Abelian Group Theory was held at the Manoa Campus of the University of Hawaii from December 28 1982 to January 4 1983 It was probably the best attended conference on Abelian Group Theory to date with 55 participants from all over the world and the busiest one with 49 talks A special feature were general interest lectures by Hyman Bass Columbia University on Non linear Algebra and by Claus Michael Ringel Universität Bielefeld on Representations of Algebras The Conference offered surveys by Laszlo Fuchs Tulane University on Torsion Modules over Valuation Rings Fred Richman New Mexico State University on Mixed Groups Paul Eklof University of California at Irvine on Set Theory and Structure Theorems Rudiger Göbel Universität Essen on Endomorphism Rings and Lee Lady University of Hawaii on Torsion Free Groups of Finite Rank The research reports attested to lively activity in the traditional and in new

areas of inquiry within and around Abelian Group Theory The best represented groups were those of finite rank without torsion a field employing increasingly sophisticated tools from ring theory and algebraic number theory The use of set theoretic methods continues to flourish after the pioneering work of Saharon Shelah in the 1970s and is delivering impressive results This volume contains the papers of the participants of the Conference and a number of additional articles of others who could not or did not come

**The Dirichlet Space and Related Function Spaces** Nicola Arcozzi, Richard Rochberg, Eric T. Sawyer, Brett D. Wick, 2019-09-03 The study of the classical Dirichlet space is one of the central topics on the intersection of the theory of holomorphic functions and functional analysis It was introduced about 100 years ago and continues to be an area of active current research The theory is related to such important themes as multipliers reproducing kernels and Besov spaces among others The authors present the theory of the Dirichlet space and related spaces starting with classical results and including some quite recent achievements like Dirichlet type spaces of functions in several complex variables and the corona problem The first part of this book is an introduction to the function theory and operator theory of the classical Dirichlet space a space of holomorphic functions on the unit disk defined by a smoothness criterion The Dirichlet space is also a Hilbert space with a reproducing kernel and is the model for the dyadic Dirichlet space a sequence space defined on the dyadic tree These various viewpoints are used to study a range of topics including the Pick property multipliers Carleson measures boundary values zero sets interpolating sequences the local Dirichlet integral shift invariant subspaces and Hankel forms Recurring themes include analogies sometimes weak and sometimes strong with the classical Hardy space and the analogy with the dyadic Dirichlet space The final chapters of the book focus on Besov spaces of holomorphic functions on the complex unit ball a class of Banach spaces generalizing the Dirichlet space Additional techniques are developed to work with the nonisotropic complex geometry including a useful invariant definition of local oscillation and a sophisticated variation on the dyadic Dirichlet space Descriptions are obtained of multipliers Carleson measures interpolating sequences and multiplier interpolating sequences estimates are obtained to prove corona theorems
