Random Walks, Brownian Motion, and Interacting Particle Systems

H. Kesten,R. Durrett,2012-12-06 This collection of articles is dedicated to Frank Spitzer on the occasion of his 65th birthday The articles written by a group of his friends colleagues former students and coauthors are intended to demonstrate the major influence Frank has had on probability theory for the last 30 years and most likely will have for many years to come Frank has always liked new phenomena clean formulations and elegant proofs He has created or opened up several research areas and it is not surprising that many people are still working out the consequences of his inventions By way of introduction we have reprinted some of Frank s seminal articles so that the reader can easily see for himself the point of origin for much of the research presented here These articles of Frank s deal with properties of Brownian motion fluctuation theory and potential theory for random walks and of course interacting particle systems The last area was started by Frank as part of the general resurgence of treating problems of statistical mechanics with rigorous probabilistic tools

Iterative Methods for Queuing and Manufacturing Systems Wai K. Ching,2013-06-29 Iterative Methods for Queuing and Manufacturing Systems introduces the recent advances and developments in iterative methods for solving Markovian queuing and manufacturing problems Key highlights include an introduction to simulation and simulation software packages Markovian models with applications in inventory control and supply chains future research directions With numerous exercises and fully worked examples this book will be essential reading for anyone interested in the formulation and computation of queuing and manufacturing systems but it will be of particular interest to students practitioners and researchers in Applied Mathematics Scientific Computing and Operational Research

International Encyclopedia of Statistical Science Miodrag Lovric,2025-06-19 The International Encyclopedia of Statistical Science stands as a monumental effort to enrich statistics education globally particularly in regions facing educational challenges By amalgamating the expertise of over 700 authors from 110 countries including Nobel Laureates and presidents of statistical societies it offers an unparalleled resource for readers worldwide This encyclopedia is not just a collection of entries it is a concerted effort to revive statistics as a vibrant critical field of study and application Providing a comprehensive and accessible account of statistical terms methods and applications it enables readers to gain a quick insight into the subject regardless of their background This work serves to refresh and expand the knowledge of researchers managers and practitioners highlighting the relevance and applicability of statistics across various fields from economics and business to healthcare and public policy Furthermore it aims to inspire students by demonstrating the significance of statistics in solving real world problems thus encouraging a new generation to explore and contribute to the field

Proceedings of the

International Conference of Computational Methods in Sciences and Engineering 2003 (ICCMSE 2003) T. E.

Simos,2003 In the past few decades many significant insights have been gained into several areas of computational methods in sciences and engineering New problems and methodologies have appeared in some areas of sciences and engineering There is always a need in these fields for the advancement of information exchange The aim of this book is to facilitate the sharing of ideas problems and methodologies between computational scientists and engineers in several disciplines Extended abstracts of papers on the recent advances regarding computational methods in sciences and engineering are provided The book briefly describes new methods in numerical analysis computational mathematics computational and theoretical physics computational and theoretical chemistry computational biology computational mechanics computational engineering computational medicine high performance computing etc

Stein's Method And Applications

Louis Hsiao Yun Chen,Andrew Barbour,2005-05-03 Stein's startling technique for deriving probability approximations first appeared about 30 years ago Since then much has been done to refine and develop the method but it is still a highly active field of research with many outstanding problems both theoretical and in applications This volume the proceedings of a workshop held in honour of Charles Stein in Singapore August 2003 contains contributions from many of the mathematicians at the forefront of this effort It provides a cross section of the work currently being undertaken with many pointers to future directions The papers in the collection include applications to the study of random binary search trees Brownian motion on manifolds Monte Carlo integration Edgeworth expansions regenerative phenomena the geometry of random point sets and random matrices

Proceeding of the 9th International Symposium on Lifeline and Infrastructure Earthquake Engineering Yang-Gang Zhao,Chengshun Xu,Fengjuan Chen,Zilan Zhong,Huiquan Miao,Bu Zhang,2025-10-13 This book is a compilation of selected papers from the 9th International Symposium on Lifeline and Infrastructure Earthquake Engineering ISLIEE 2024 The work focuses on innovative methodologies and the practical applications of these technologies in the field of Earthquake Engineering including disaster prevention and mitigation performance deterioration and service safety structural diagnosis and treatment reliability analysis structural health monitoring SHM and disaster resilience of civil engineering infrastructures Besides the development of basic theoretical knowledges new numerical and experimental methods this book illustrates application of these innovative methodologies in practical engineering in particular in large scale civil engineering infrastructures Gathering the newest development the contents make valuable contributions to academic researchers and engineers in the industry As well readers will encounter new ideas for realizing a more efficient and safer system

Highly Structured Stochastic Systems Peter J. Green,Nils Lid Hjort,Sylvia Richardson,2003 Highly Structured Stochastic Systems HSSS is a modern strategy for building statistical models for challenging real world problems for computing with them and for interpreting the resulting inferences Complexity is handled by working up from simple local assumptions in a coherent way and that is the key to modelling computation inference and interpretation the unifying framework is that of Bayesian hierarchical models The aim of this book is to make recent developments in HSSS accessible to a general statistical audience

Graphical modelling and Markov chain Monte Carlo MCMC methodology are central to the field and in this text they are covered in depth. The chapters on graphical modelling focus on causality and its interplay with time, the role of latent variables and on some innovative applications. Those on Monte Carlo algorithms include discussion of the impact of recent theoretical work on the evaluation of performance in MCMC extensions to variable dimension problems and methods for dynamic problems based on particle filters. Coverage of these underlying methodologies is balanced by substantive areas of application in the areas of spatial statistics with epidemiological, ecological and image analysis applications and biology including infectious diseases, gene mapping and evolutionary genetics. The book concludes with two topics: model criticism and Bayesian nonparametrics that seek to challenge the parametric assumptions that otherwise underlie most HSSS models. Altogether there are 15 topics in the book and for each there is a substantial article by a leading author in the field and two invited commentaries that complement, extend or discuss the main article and should be read in parallel. All authors are distinguished researchers in the field and were active participants in an international research programme on HSSS. This is the 27th volume in the Oxford Statistical Science Series which includes texts and monographs covering many topics of current research interest in pure and applied statistics. These texts focus on topics that have been at the forefront of research interest for several years. Other books in the series include J. Durbin and S. J. Koopman, *Time series analysis by State Space Models*; Peter J. Diggle, Patrick Heagerty, Kung Yee Liang and Scott L. Zeger, *Analysis of Longitudinal Data 2*; J. K. Lindsey, *Nonlinear Models in Medical Statistics*; Peter J. Green, Nils L. Hjort and Sylvia Richardson, *Highly Structured Stochastic Systems*; Margaret S. Pepe, *Statistical Evaluation of Medical Tests*. **The Cumulative Book Index**, 1978. A world list of books in the English language.
