Symptoms Illness Behavior And Help Seeking:

Symptoms, Illness Behavior, and Help-seeking David Mechanic, 1982 Presenting a new argument this book attacks the view that if a fetus has the moral standing of a person it has a right to life and abortion is impermissible Most discussion of abortion has assumed that this premise is correct and so has focused on the question of the personhood of the fetus Kamm however argues that abortion can be moral even if the fetus is indeed a person Kamm begins by examining the Supreme Court's Roe v Wade decision and considers whether the potential to become a person should protect the fetus from abortion After presenting the case for killing persons in non abortion contexts she goes on to apply this argument to the case of abortion and offers a detailed consideration of the differences between the two cases focusing in particular on the significance of pregnancy as a natural phenomenon that occurs to only one of the two sexes Kamm develops her own argument defending the morality of abortion which emerges as part of a broader theory of creating new people responsibly In a concluding chapter she explores the implications of her argument for informed consent to abortion responsibilities in pregnancy that is not aborted and the significance of extra uterine gestation devices for the permissibility of abortion

Illness Behavior Sean McHugh, T. Michael Vallis, 2012-12-06 In August 1985 the 2nd International Conference on Illness Behaviour was held in Toronto Ontario Canada The first International Conference took place one year previous in Adelaide South Australia Australia This book is based on the proceedings of the second conference The purpose behind this conference was to facilitate the development of a single integrated model to account for illness experience and presentation A major focus of the conference was to outline methodological issues related to current behaviour research A multidisciplinary approach was emphasized because of the bias that collaborative efforts are likely to be the most successful in achieving greater understanding of illness behaviour Significant advances in our knowledge are occurring in all areas of

the biological and social sciences albeit more slowly in the latter areas. Marked specialization in each of these areas has led to greater difficulty in integrating new knowledge with that of other areas and the development of a meaningful cohesive model to which all can relate. Thus there is a major need for forums such as that provided by this conference.

The Patient Hoyle Leigh, 2013-03-08. The old-fashioned doctor whose departure from the modern medical scene is so greatly lamented was amply aware of each patient's personality, family, work, and way of life. Today we often blame a doctor's absence of that awareness on moral or ethical deficiency, either in medical education or in the character of people who become physicians. An alternative explanation, however, is that doctors are just as moral, ethical, and concerned as ever before, but that a vast amount of additional new information has won the competition for attention. The data available to the old-fashioned doctor were a patient's history, physical examination, and personal profile, together with a limited number of generally ineffectual therapeutic agents. A doctor today deals with an enormous array of additional new information which comes from X-rays, biopsies, cytology, electrographic tracings, and the phantasmagoria of contemporary laboratory tests, and the doctor must also be aware of a list of therapeutic possibilities that are both far more effective and far more extensive than ever before.

Handbook of Clinical Skills Balu H. Athreya, 2010. Effective diagnostic and clinical management skills require competency in observing, listening, communicating, problem-solving, and negotiating. In addition, the physician needs human relationship skills. It is apparent that a systematic curriculum is needed to teach these clinical skills to medical students and trainees, and this handbook provides a practical guide.

Search for the Causes of Schizophrenia Heinz Häfner, Wagner F. Gattaz, 2012-12-06. H. HAFNER and W. F. GATTAZ. Between 1891 and 1955, three founders of modern psychiatry: Emil Kraepelin (1856-1926), Karl Jaspers (1883-1969), and Kurt Schneider (1887-1967) lectured at the University of Heidelberg. Kraepelin for 12 years, Jaspers for over 25 years, and Schneider for approximately 10 years. During this period, they laid the foundations of descriptive psychopathology and modern classification and contributed essentially to the development of our current thinking on schizophrenia. In 1986, on the occasion of the 600th anniversary of the University of Heidelberg, we held

a symposium in memory of these three giants of psychiatry for which we chose the title Search for the Causes of Schizophrenia It was jointly organized by the Central Institute of Mental Health in Mannheim and the Department of Psychiatry of the University of Heidelberg The intention was to meet one of the major challenges of current psychiatric research namely the fact that since Kraepelin s masterly description of Dementia praecox 1894 and E Bleuler s slightly different definition of schizophrenia 1911 we have made only insufficient advances in clarifying the aetiology of this frequent and still often disabling mental disease

Health Psychology of Women Catherine Niven,Doug Carroll,2013-12-16 First Published in 1993 Since health psychology is concerned with the universal values of life and death well being and suffering it might be expected that its researchers would be keen to examine both male and female experiences of these phenomena In practice however health psychology has followed health research in adopting a largely male perspective both in its general approach and selection of topics Women are different from men not only in terms of anatomy but in terms of the socialization processes to which they have been exposed and the social and economic positions they occupy These differences have a significant impact on women s health predisposing them to some disorders and protecting them from others While it is true that male mortality exceeds female mortality from conception to old age women s survival has the price of increased mental and physical illness Men die but women suffer Despite a growing awareness of these differences there continues to be a distinct bias towards using male subjects for research and studying those diseases which affect more men than women The Health Psychology of Women is a response to this imbalance and a challenge to the attitude which explores the behavior of half the population in order to draw conclusions about the experience of the whole It is essential reading for students and researchers of psychology and health and health professionals in training and practice
