Mixed Styles in Spoken Arabic in Egypt Gunvor Mejdell, 2017-07-03 This volume deals with the linguistic behaviour of Egyptian academics in a specific setting the panel presentation assumed to represent a discourse genre to which speakers will respond with some kind of similar stylistic norm reflected in linguistic choices among variants of a feature The features selected for investigation are complementizers demonstratives negation relatives and pronoun suffixation all of which have binary variants in the two basic codes available to the speaker the standard variety and the vernacular The use of the variants is discussed for each speaker and across speakers demonstrating certain patterns of distribution order but also a high degree of variable usage chaos The investigation is set in a wider comparative sociolinguistic framework

The Limits of Syntactic Variation Theresa Biberauer, 2008-09-17 Against the background of the past half century's typological and generative work on comparative syntax this volume brings together 16 papers considering what we have learned and may still be able to learn about the nature and extent of syntactic variation More specifically it offers a multi perspective critique of the Principles and Parameters approach to syntactic variation evaluating the merits and shortcomings of the pre Minimalist phase of this enterprise and considering and illustrating the possibilities opened up by recent empirical and theoretical advances Contributions focus on four central topics firstly the question of the locus of variation whether the attested variation may plausibly be understood in parametric terms and if so what form such parameters might take secondly the fate of one of the most prominent early parameters the Null Subject Parameter thirdly the matter of parametric clusters more generally and finally acquisition issues

Selected Papers from the 2006 Cyprus Syntaxfest Kleanthes K. Grohmann, Phoevos Panagiotidis, 2009-03-26 This volume presents a selection of contributions from the week long Cyprus Syntaxfest in 2006 which brought together research in syntax by several respected and prolific theoretical linguists from all over the world

During the six days of the Syntaxfest work from a variety of viewpoints in modern generative grammar was presented and the research discussed and debated followed diverse methodological paths with the thematic focus on left peripheries in linguistic structures and their interface interpretation The current collection of expanded versions of selected research presented at the Cyprus Syntaxfest reflects a wide variety of approaches to these topics it also provides a glimpse of the rich sample of cross linguistic data that informed the discussions of syntactic peripheries and their interface interpretation It offers eleven studies on clausal and nominal left peripheral phenomena and their role in interpretation in a variety of typologically unrelated languages More significantly the contributions collected here underscore the by now established importance and theoretical interest of studying the edge of constituents whether phasal or not In every chapter the blueprint of a general interpretive hierarchy driving and constraining syntax is also retraced throughout

Comparisons and Contrasts Richard S. Kayne, 2010-08-19 *Comparisons and Contrasts* collects eleven of Richard Kayne's recent articles in theoretical syntax with an emphasis on comparative syntax which uses syntactic differences among languages to probe the properties of the human language faculty Kayne attaches particular importance to uncovering the primitives of syntax semantics demonstrating the existence of silent elements that are syntactically and semantically active and showing their distribution and limitations He attempts to derive the very existence of the noun verb distinction and to account for the sharp differences between nouns and verbs and for the lack of parallelism between them from the antisymmetric character of syntax The common theme is an exploration of how wide a range of questions the field of syntax can reasonably attempt to ask and then answer *Comparisons and Contrasts* will appeal to scholars and graduate students interested in syntax semantics and their effects on other areas of linguistics

Agreement, Pronominal Clitics and Negation in Tamazight Berber Hamid Ouali, 2011-01-13 This book presents a study of various important aspects of Tamazight Berber syntax within the generative tradition Work on Berber linguistics from a generative perspective remains in many ways uncharted territory There has been hardly any published research on this language and its different dialects especially in English this book fills some of these gaps and lays down the foundations for further research Ouali looks at three seemingly disparate ranges of syntactic phenomena namely Subject verb agreement Clitic doubling and Negative Concord These phenomena have received different analytical treatments but Ouali proposes that they are all forms of agreement derived under the same Chomskian Agree mechanism The book addresses a fundamental question in the ongoing debate in recent Minimalism with regard to how subject verb agreement is obtained and proposes a new analysis of the so called Anti Agreement Effect It will be of interest to all syntacticians and to researchers in Afroasiatic languages

A Unified Theory of Polarity Sensitivity Ahmad Alqassas, 2021 Polarity sensitivity is a ubiquitous phenomenon involving expressions such as anybody nobody ever never somebody and their counterparts in other languages These expressions belong to different classes such as negative and positive polarity negative concord and negative indefinites In this book Ahmad Alqassas proposes a unified approach to the study of this phenomenon that relies on examining the interaction

between the various types of polarity sensitivity with a particular focus on Arabic Alqassas shows that treating this interaction is fundamental for scrutinizing their licensing conditions Alqassas draws on data from Standard Arabic and the major regional dialects represented by Jordanian Egyptian Moroccan and Qatari Through the micro comparative approach Alqassas explains the distributional contrasts with a minimal set of universal syntactic operations such as Merge Move and Agree He also considers a fine grained inventory of negative formal features for polarity items and their licensors These simple features paint a complex landscape of polarity and lead to important conclusions about syntactic computation By engaging with the rich but under studied landscape of Arabic polarity sensitivity this book provides a new perspective on the syntax semantic interface and develops a unified syntactic analysis for polarity sensitivity These contributions have important implications for the study of Arabic and for syntactic theory more generally
