Politics of Climate Change Birgit Schneider,Thomas Nocke,2014-06-15 Scientific research on climate change has given rise to a variety of images picturing climate change These range from colorful expert graphics model visualizations photographs of extreme weather events like floods droughts or melting ice symbols like polar bears to animated and interactive visualizations Climate change graphics have not only increased knowledge about the subject they have begun to influence popular awareness of global weather events The status of climate pictures today is particularly crucial as global climate change as a long term process cannot be seen When images are widely distributed they are able to shape how the world is thought about and seen It is this implicit basic assumption of the power of images to influence reality that this book addresses today s images might become the blueprint for tomorrow s realities Image Politics of Climate Change combines a wide interdisciplinary range of perspectives and questions treated here in sixteen interdisciplinary case studies The author s specializations include both visual practice and theory in the fields of climate sciences computer graphics art curating art history and visual studies communication and cultural science environmental and science technology studies The close interlinking of these viewpoints promotes in depth insights into issues of production and analysis of climate visualization

Why We Disagree about Climate Change Mike Hulme,2009-04-30 A unique insider s account of climate change and the diverse ways in which it is understood **Weathered** Mike Hulme,2016-06-15 Climate is an enduring idea of the human mind and also a powerful one Today the idea of climate is most commonly associated with the discourse of climate change and its scientific political economic social religious and ethical dimensions However to understand adequately the cultural politics of climate change it is important to establish the different origins of the idea of climate itself and the range of historical political and cultural work that the idea of climate accomplishes In Weathered Cultures of Climate distinguished professor Mike Hulme opens up the many ways in which the idea of climate is given shape and meaning in different human cultures how climates are historicized known changed lived with blamed feared represented predicted governed and at least putatively re designed The Climate Change Convention and Developing Countries J. Gupta,2013-03-09 The climate change problem can only be effectively dealt with if global anthropogenic greenhouse gas GHG emissions can be reduced substantially Since the emission of such gases is closely related to the economic growth of countries a critical problem to be addressed by the United Nations Framework Convention on Climate Change FCCC is how will the permissible emission levels be shared between industrialised ICs and developing countries DCs The thesis of this book is that the long term effectiveness of the FCCC runs the risk of a horizontal negotiation deadlock between countries and the risk of vertical standstill within countries if there is little domestic support for the domestic implementation of measures being announced in international negotiations The research question is Can one observe trends towards horizontal deadlock and vertical standstill and if yes

how can the treaty design be improved so as to avoid such potential future bottlenecks The research focuses on the perspectives of domestic actors on the climate convention and related issues in four developing countries India Indonesia Kenya and Brazil The following key findings emerge from the research 1 Handicapped negotiating power The common theme of the foreign policy of DCs is that ICs are responsible for the bulk of the GHG emissions and need to take appropriate domestic action *The Climate Time Bomb* Greenpeace International. Climate Impacts Unit,1995 **State of the World 1985** ,1984 **Divided Planet** Tom Athanasiou,1998 Global warming Soil loss Freshwater scarcity Extinction Overconsumption Toxic waste production Habitat and biodiversity erosion These are only a few of our most urgent ecological crises There are others as well and despite the popularity of good news environmentalism few of them are going away In this wide ranging grimly entertaining commentary on the environmental debate Tom Athanasiou finds that these problems are exacerbated if not caused by the planet s division into warring camps of rich and poor Writing with passionate intelligence Athanasiou proposes a simple yet radical solution stop indulging easy calming fantasies in which everything seems to change but nothing important changes at all Instead do what needs to be done now while there is still time and goodwill The bottom line he concludes is that there will be no sustainability without a large measure of justice Without profound political and economic change he argues there can be no effective global environmental action no real effort to save the planet
