Scholarship in the Digital Age Christine L. Borgman,2010-08-13 An exploration of the technical social legal and economic aspects of the scholarly infrastructure needed to support research activities in all fields in the twenty first century Scholars in all fields now have access to an unprecedented wealth of online information tools and services The Internet lies at the core of an information infrastructure for distributed data intensive and collaborative research Although much attention has been paid to the new technologies making this possible from digitized books to sensor networks it is the underlying social and policy changes that will have the most lasting effect on the scholarly enterprise In *Scholarship in the Digital Age* Christine Borgman explores the technical social legal and economic aspects of the kind of infrastructure that we should be building for scholarly research in the twenty first century Borgman describes the roles that information technology plays at every stage in the life cycle of a research project and contrasts these new capabilities with the relatively stable system of scholarly communication which remains based on publishing in journals books and conference proceedings No framework for the impending data deluge exists comparable to that for publishing Analyzing scholarly practices in the sciences social sciences and humanities

Borgman compares each discipline's approach to infrastructure issues. In the process she challenges the many stakeholders in the scholarly infrastructure: scholars, publishers, libraries, funding agencies, and others to look beyond their own domains to address the interaction of technical, legal, economic, social, political, and disciplinary concerns. *Scholarship in the Digital Age* will provoke a stimulating conversation among all who depend on a rich and robust scholarly environment.

Big Data, Little Data, No Data Christine L. Borgman, 2017-02-03 An examination of the uses of data within a changing knowledge infrastructure offering analysis and case studies from the sciences, social sciences, and humanities. Big Data is on the covers of *Science*, *Nature*, *The Economist*, and *Wired* magazines; on the front pages of *The Wall Street Journal* and *The New York Times*. But despite the media hyperbole, as Christine Borgman points out in this examination of data and scholarly research, having the right data is usually better than having more data: little data can be just as valuable as big data. In many cases there are no data because relevant data don't exist, cannot be found, or are not available. Moreover, data sharing is difficult; incentives to do so are minimal, and data practices vary widely across disciplines. Borgman, an often cited authority on scholarly communication, argues that data have no value or meaning in isolation; they exist within a knowledge infrastructure, an ecology of people, practices, technologies, institutions, material objects, and relationships. After laying out the premises of her investigation, six provocations meant to inspire discussion about the uses of data in scholarship, Borgman offers case studies of data practices in the sciences, the social sciences, and the humanities, and then considers the implications of her findings for scholarly practice and research policy. To manage and exploit data over the long term, Borgman argues, requires massive investment in knowledge infrastructures; at stake is the future of scholarship.

Indirect Reports and Pragmatics Alessandro Capone, Ferenc Kiefer, Franco Lo Piparo, 2015-12-01 This volume offers the reader a singular overview of current thinking on indirect reports. The contributors are eminent researchers from the fields of philosophy of language, theoretical linguistics, and communication theory who answer questions on this important issue. This exciting area of controversy has until now mostly been treated from the viewpoint of philosophy. This volume adds the views from semantics, conversation analysis, and sociolinguistics. Authors address matters such as the issue of semantic minimalism vs. radical contextualism, the attribution of responsibility for the modes of presentation associated with Noun Phrases, and how to distinguish the indirect reporter's responsibility from the original speaker's responsibility. They also explore the connection between indirect reporting and direct quoting. Clearly, indirect reporting has some bearing on the semantics/pragmatics debate; however, there is much controversy on what is said: whether this is a minimal semantic logical form enriched by saturating pronominals or a much richer and fully contextualized logical form. This issue will be discussed from several angles. Many of the authors are contextualists, and the discussion brings out the need to take context into account when one deals with indirect reports: both the context of the original utterance and the context of the report. It is interesting to see how rich cues and clues can radically transform the reported message, assigning illocutionary force and how they can be mobilized to distinguish several

voices in the utterance Decoupling the voice of the reporting speaker from that of the reported speaker on the basis of rich contextual clues is an important issue that pragmatic theory has to tackle Articles on the issue of slurs will bring new light to the issue of decoupling responsibility in indirect reporting while others are theoretically oriented and deal with deep problems in philosophy and epistemology *Understanding Social Research Networking Sites* Jens-Henrik Soeldner,2020-08-31 Research collaboration is a critical enabler for scientific knowledge production and innovation but poses significant challenges particularly if it is carried out in a distributed and geographically dispersed fashion Jens Henrik Soeldner investigates how social research networking sites can help make scientific collaboration in management research more productive and successful The author builds on a comprehensive literature review and two empirical studies to elucidate how social research networking sites can be leveraged for various research related tasks *Academic Writing and Publishing* James Hartley,2008-04-22 This readable and lively guide is an invaluable handbook for postgraduates and lecturers new to publishing with direct advice based on up to date research that goes beyond that given in current textbooks Examining Paratextual Theory and its Applications in Digital Culture Desrochers, Nadine,2014-04-30 The paratext framework is now used in a variety of fields to assess measure analyze and comprehend the elements that provide thresholds allowing scholars to better understand digital objects Researchers from many disciplines revisit paratextual theories in order to grasp what surrounds text in the digital age Examining Paratextual Theory and its Applications in Digital Culture suggests a theoretical and practical tool for building bridges between disciplines interested in conducting joint research and exploration of digital culture Helping scholars from different fields find an interdisciplinary framework and common language to study digital objects this book serves as a useful reference for academics librarians professionals researchers and students offering a collaborative outlook and perspective
