energy in particular the use of photovoltaic cells is both economically advantageous and inevitable and will rival the information and communication technologies revolution in its transformative effects In Solar Revolution fund manager and former corporate buyout specialist Travis Bradford argues on the basis of standard business and economic forecasting models that over the next two decades solar energy will increasingly become the best and cheapest choice for most electricity and energy applications Solar Revolution outlines the path by which the transition to solar technology and sustainable energy practices will occur Developments in the photovoltaic PV industry over the last ten years have made direct electricity generation from PV cells a cost effective and feasible energy solution despite the common view that PV technology appeals only to a premium niche market Bradford shows that PV electricity today has become the choice of hundreds of thousands of mainstream homeowners and businesses in many markets worldwide including Japan Germany and the American Southwest Solar energy will eventually be the cheapest source of energy in nearly all markets and locations because PV can bypass the aging and fragile electricity grid and deliver its power directly to the end user fundamentally changing the underlying economics of energy As the scale of PV production increases and costs continue to decline at historic rates demand for PV electricity will outpace supply of systems for years to come Ultimately the shift from fossil fuels to solar energy will take place not because solar energy is better for the environment or energy security or because of future government subsidies or as yet undeveloped technology The solar revolution is already occurring through decisions made by self interested energy users The shift to solar energy is inevitable and will be as transformative as the last century's revolutions in information and communication technologies

Power to the People Vijay V. Vaitheeswaran, 2025-09-23 A guided tour of a revolution in the making that promises to change our lives. Global warming, rolling blackouts, massive tanker spills, oil dependence, our profligate ways have doomed us to suffer such tragedies, right? Perhaps, but Vijay Vaitheeswaran, the energy and environment correspondent for The Economist, sees great opportunity in the energy realm today, and *Power to the People* is his fiercely independent and irresistibly entertaining look at the economic, political, and technological forces that are reshaping the world's management of energy resources. In it, he documents an energy revolution already underway, a revolution as radical as the communications revolution of the past decades. From the corporate boardroom of a Texas oil titan who denies the reality of global warming to a think tank nestled in the Rocky Mountains where a visionary named Amory Lovins is developing the kind of hydrogen fuel cell technology that could make the internal combustion engine obsolete, Vaitheeswaran gamely pursues the people who hold the keys to our future. Man's quest for energy is insatiable. It is also essential. By avoiding the traditional binaries that pit free markets against the wisdom of conservation and the need for clean energy, *Power to the People* is a book that debunks myths without debunking hope.

Keeping the Lights On Walt Patterson, 2012-05-16 This is such a timely book. Combining extraordinary historical insight with the sharpest analysis of where we are now, Walt Patterson carves out the most applied and practical of road maps as to where we need to go if we are to deliver a genuinely sustainable electricity system for the future. As we go into a period of considerable turbulence, primarily because of the impacts of climate change, *Keeping The Lights On* will undoubtedly be seen as a very well informed Guidebook.

JONATHON PORRITT CBE CHAIR UK SUSTAINABLE DEVELOPMENT COMMISSION A very important and timely book. Walt Patterson persuasively challenges traditional assumptions about how we think of energy and electricity and presents an exciting vision of an innovative and sustainable future.

NICK MABEY CHIEF EXECUTIVE E3G THIRD GENERATION ENVIRONMENTALISM FORMER SENIOR ADVISER IN THE UK PRIME MINISTERS STRATEGY UNIT Walt has got this exactly right. It should be compulsive reading, if not compulsory reading, for all politicians and other players that determine or have a role to play in energy policy and more importantly in tackling climate change. Knowing what we know now, you would not implement such a wasteful and polluting electricity system as centralized power generation. As Walt has indicated, we do have to overcome the grid mindset of those who should know better.

ALLAN JONES MBE CHIEF EXECUTIVE OFFICER LONDON CLIMATE CHANGE AGENCY What can I say? Clearly thought out, simply written, and straight to the heart of the
