Smart Card Technologies And Applications:

Smart Card Technologies and Applications ,2000 Smart Card. Research and Applications Jean-Jacques

Quisquater, Bruce Schneier, 2006-12-30 Smart cards have been driven by the need for a secure portable computing platform. Hence it is no surprise that security considerations dominated their research. The CARDIS conferences were created to provide a forum for this research. CARDIS 1998 is the third international conference on Smart Card Research and Advanced Applications held in Louvain-la-Neuve, Belgium, 14-16 September 1998. The first CARDIS was held in Lille, France, in November 1994 and the second was held in Amsterdam, The Netherlands, in September 1996. The fourth CARDIS is scheduled to take place in Bristol, UK, in September 2000. <http://www.cardis.org> This volume contains the refereed papers presented at CARDIS 1998. These 35 papers were first published in a pre-proceedings and distributed to the attendees at the conference; they have subsequently been revised and updated for this volume. The papers discuss all aspects of smart card research: Java cards, electronic commerce applications, efficiency, security, including cryptographic algorithms, cryptographic protocols, and authentication and architecture. Submissions from Europe, the U.S., Asia, and Australia show that this is indeed an international area of research and one that is becoming more popular as practical demand for smart cards increases. We wish to thank the Program Committee members who did an excellent job in reviewing papers and providing feedback to the authors.

Multi-application Smart Cards Mike Hendry, 2007-06-28 Multi-application smart cards have yet to realise their enormous potential, partly because few people understand the technology, market, and behavioural issues involved. Here Mike Hendry sets out to fill this knowledge gap with a comprehensive and accessible guide. Following a review of the state of the art in smart card technology, the book describes the business requirements of each smart card using sector and the systems required to support multiple applications. Implementation aspects, including security, are treated in detail, and numerous international case studies cover identity, telecoms, banking, and transportation applications. Lessons are drawn from these studies to help deliver more successful projects in the future. Invaluable for users and integrators specifying, evaluating, and integrating multi-application systems, the book will also be useful to terminal card and system designers, network IT, and security managers and software specialists. **Computing Technologies and Applications** Latesh Malik, Sandhya

Arora, Urmila Shrawankar, Maya Ingle, Indu Bhagat, 2021-11-09 Making use of digital technology for social care is a major responsibility of the computing domain. Social care services require attention for ease in social systems, e-farming, and automation, etc. Thus, the book focuses on suggesting software solutions for supporting social issues such as health care, learning about and monitoring for disabilities, and providing technical solutions for better living. Technology is enabling people to have access to advances so that they can have better health. To undergo the digital transformation, the current processes need to be completely re-engineered to make use of technologies like the Internet of Things (IoT), big data analytics, artificial intelligence, and others. Furthermore, it is also important to consider digital initiatives in tandem with their cloud

strategy instead of treating them in isolation At present the world is going through another possibly even stronger revolution the use of recent computing models to perform complex cognitive tasks to solve social problems in ways that were previously either highly complicated or extremely resource intensive This book not only focuses the computing technologies basic theories challenges and implementation but also covers case studies It focuses on core theories architectures and technologies necessary to develop and understand the computing models and their applications The book also has a high potential to be used as a recommended textbook for research scholars and post graduate programs The book deals with a problem solving approach using recent tools and technology for problems in health care social care etc Interdisciplinary studies are emerging as both necessary and practical in universities This book helps to improve computational thinking to understand and change the world It will be a link between computing and a variety of other fields Case studies on social aspects of modern societies and smart cities add to the contents of the book to enhance book adoption potential This book will be useful to undergraduates postgraduates researchers and industry professionals Every chapter covers one possible solution in detail along with results
