Metallic Amorphous Alloy Reinforcements in Light Metal Matrices S. Jayalakshmi, M. Gupta, 2015-02-24 This book presents cutting edge research on the design and development of novel advanced high strength light weight materials via the incorporation of novel reinforcements namely metallic amorphous alloys bulk metallic glasses BMG in light metal matrix composites LMMCs based on Al and Mg The book begins with an introduction to conventional ceramic reinforced light metal matrix composites along with the major drawbacks which limit their application Metallic amorphous alloys Bulk Metallic Glasses BMG are new class of metallic materials that are distinctly differently from conventional metals alloys in terms of their structure and thermal behavior and exhibit extremely high strength 1 to 2 GPa and large elastic strain limit 1 to 2% Given these unique properties upon their incorporation into Al Mg matrices they provide superior interfacial properties i e high degree of compatibility with the matrix due to their metallic nature when compared to

conventional ceramic reinforcements and thereby significantly enhance the mechanical performance of LMMCs Amorphous BMG reinforced LMMCs is an emerging research field and the existing literature is meager This book discusses the various processing methods that would be suitable for these novel materials A comparison of mechanical properties and strengthening mechanisms of amorphous BMG reinforced composites with those of conventional ceramic composites is presented Future research directions and wider research potential of the novel materials are discussed and prospective applications are highlighted For ease of understanding and comparison appropriate schematics tables and figures are provided

Using the Engineering Literature Bonnie A. Osif, 2006-08-23 The field of engineering is becoming increasingly interdisciplinary and there is an ever growing need for engineers to investigate engineering and scientific resources outside their own area of expertise However studies have shown that quality information finding skills often tend to be lacking in the engineering profession Using the Engineerin *Using the Engineering Literature, Second Edition* Bonnie A. Osif, 2011-08-09 With the encroachment of the Internet into nearly all aspects of work and life it seems as though information is everywhere However there is information and then there is correct appropriate and timely information While we might love being able to turn to Wikipedia for encyclopedia like information or search Google for the thousands of links on a topic engineers need the best information information that is evaluated up to date and complete Accurate vetted information is necessary when building new skyscrapers or developing new prosthetics for returning military veterans While the award winning first edition of *Using the Engineering Literature* used a roadmap analogy we now need a three dimensional analysis reflecting the complex and dynamic nature of research in the information age *Using the Engineering Literature Second Edition* provides a guide to the wide range of resources available in all fields of engineering This second edition has been thoroughly revised and features new sections on nanotechnology as well as green engineering The information age has greatly impacted the way engineers find information Engineers have an effect directly and indirectly on almost all aspects of our lives and it is vital that they find the right information at the right time to create better products and processes Comprehensive and up to date with expert chapter authors this book fills a gap in the literature providing critical information in a user friendly format

Digitalization of design for support structures in laser powder bed fusion of metals Katharina Bartsch, 2023-02-18 Additive manufacturing is considered a key technology for digital production However several barriers towards the broad industrial application exist e g the associated cost and the required experience regarding the manufacturing process To eradicate these barriers the complete digitalization of the value creation process is needed In this thesis a digital automated support structuredesign procedure is developed Topology optimization is used for design rule determination and the space colonization algorithm is adapted for the automated design The validity of the procedure is proven experimentally revealing sufficient mechanical performance alongside cost reduction at medium to large production scales

Semi-solid Processing of Alloys David H. Kirkwood, Michel Suéry, Plato Kapranos, Helen V. Atkinson, Kenneth P. Young, 2009-11-27 Semisolid metallurgy SSM is now some 37 years old in terms of time from its conception and first reduction to practice in the laboratory In the intervening years there has been a steadily growing body of research on the subject and the beginning of significant industrial applications The overall field of SSM comprises today a large number of specific process routes almost all of which fall in the category of either Rheocasting or Thixocasting The former begins with liquid metal and involves agitation during partial solidification followed by forming The latter begins with solid metal of suitable structure and involves heating to the desired fraction solid and forming Research over the past 37 years and particularly over the last decade has provided a detailed picture of process fundamentals and led to a wide range of specific SSM processes and process innovations Industrial studies and actual production experience are providing a growing picture of the process advantages and limitations At this time the conditions for eventual wide adoption of SSM appear favorable both for nonferrous and ferrous alloys It must however be recognized that major innovations such as SSM become adopted only slowly by industries where capital
