Social Costs Of Energy Consumption:

Social Costs of Energy Consumption Olav Hohmeyer,2012-12-06 It has become apparent that the market diffusion of systems using new and renewable sources of energy such as solar systems wind energy converters etc is taking place more slowly than expected see e g Jochem et al 1986 p 338 This indicates that various barriers to the market introduction of such technologies have been underestimated This hypothesis is supported by the accelerating effect of strong financial incentives on market diffusion rates of wind energy systems in such countries as Denmark and the USA see Jochem et al 1986 p 340f It is often pointed out that the macroeconomic and social advantages of new energy technologies such as environmental attractiveness reduction of dependence on energy imports or resource preservation and the hidden costs of conventional energy systems are not adequately represented in microeconomic evaluations see Wicke 1986 p 12 or Solow 1982 p 32 The general market pricing mechanism does not seem to work adequately in such cases In any seriously distorted market government has to compensate by internalizing the external effects of economic processes see e g Solow 1982 p 31 or Osterkamp Schneider 1982 p 27 Therefore research efforts to estimate the full costs of energy systems to society are necessary The knowledge of these full social costs of energy could enable government to take corrective action to help the market mechanism achieve an optimal allocation of resources

Social Costs of Energy Consumption Hariolf Grupp,Olav Hohmeyer,1988-05-05

Social Costs of Energy Olav Hohmeyer,Richard L. Ottinger,2012-12-06 Although present day politics seems to be preoccupied with questions of economic growth and full employment the basic environmental problems stemming from the interactions of the economic sphere with global regional and local environments persist and will have an even greater impact in the future If economy and ecology are not reconciled in the years to come mankind will not have a sustainable future on Earth The typical negation of environmental problems in times of economic crisis is partially due to the fact that environmental and health damages of economic activities are neither priced nor included in our market price system This allows politicians to focus their attention on insufficient economic indicators which do not reflect the actual development of the welfare of society If economic lead indicators like GDP or balance of trade figures were better integrated with information on the environmental and health costs caused by the seemingly beneficial economic development politicians might have better guidance as to what policy choices would benefit society most

External Environmental Costs of Electric Power Olav Hohmeyer, Richard L. Ottinger, 2012-12-06 Environmental costs of electric power generation are receiving increasing attention as an important input to planning and decision processes Since the outstart of the discussion on the monetized environmental costs of electricity in 1988 a number of studies have been conducted on the subject producing partially contradictory results Simultaneously political action has resulted from the first stage on this discussion process In Germany the higher rates which have to be paid to autoproducers based on renewable energy sources have been explicitly justified by the existence of external environmental costs of conventional electricity generation At the same time some state regulatory commissions in the United States have introduced adders for environmental costs in the utility planning process This book reports on the first international workshop on the subject bringing together practically all experts in the field of research and political implementation from the United States and Germany the two pioneering countries The more than thirty contributed papers contained in this volume give the most comprehensive and up to date overview of the field Some papers already outline the future course of research by giving an overview over some major research projects which have just started *Energy and Environment* John Byrne, Danile Rich, 2021-10-29 Originally published in 1991 this volume number 6 in the Energy Policy Studies series focuses on important interconnections between energy use and global change issues such as upper atmosphere ozone depletion and global warming Policy options for meeting these challenges are explored in eight contributed chapters that concentrate on Energy and the Environment economic growth and industrialisation in Europe a comparison of solar and nuclear options as well costs surrounding electricity generation and sustainable development *Likely Social Impacts of Proposed National-level Policy Initiatives*, 1981 This report describes the results of an investigation of likely social effects of enacting nine proposed national level policy initiatives to accelerate development and use of solar energy This study is part of the Technology Assessment of Solar Energy Systems TASE project supported by the U S Dept of Energy The report identifies the effects of each initiative on individuals groups organizations communities and society as a whole In addition it provides a framework

Subcommittee on Energy and Power, 1976 **Sustainable Energy Consumption in Residential Buildings** Klaus Rennings, Bettina Brohmann, Julia Nentwich, Joachim Schleich, Thure Traber, Rolf Wüstenhagen, 2012-07-30 As the residential buildings sector accounts for around 30 percent of the final energy demand in Germany this sector is increasingly becoming the focus of public attention with regard to climate change In this book decisions on energy consumption by private households are examined The analyses are based on several empirical methods The results show that the road to more sustainable energy consumption in residential buildings is not hampered by a lack of will on behalf of the consumers However one should be realistic that there are many instances where improving thermal insulation involves additional economic costs for individual households **The Environmental Costs of Transportation Energy Use** United States. Congress. House. Committee on Science, Space, and Technology. Subcommittee on Environment, 1992 Distributed to some depository libraries in microfiche Energy Research at DOE National Research Council, Division on Engineering and Physical Sciences, Board on Energy and Environmental Systems, Committee on Benefits of DOE R&D on Energy Efficiency and Fossil Energy, 2001-12-12 In legislation appropriating funds for DOE's fiscal year FY 2000 energy R D budget the House Interior Appropriations Subcommittee directed an evaluation of the benefits that have accrued to the nation from the R D conducted since 1978 in DOE's energy efficiency and fossil energy programs In response to the congressional charge the National Research Council formed the Committee on Benefits of DOE R D on Energy Efficiency and Fossil Energy From its inception DOE's energy R D program has been the subject of many outside evaluations The present evaluation asks whether the benefits of the program have justified the considerable expenditure of public funds since DOE's formation in 1977 and unlike earlier evaluations it takes a comprehensive look at the actual outcomes of DOE's research over two decades
