Knowledge Networks and Craft Traditions in the Ancient World Katharina Rebay-Salisbury,Ann Brysbaert,Lin Foxhall,2014-08-07 This edited volume investigates knowledge networks based on materials and associated technologies in Prehistoric Europe and the Classical Mediterranean It emphasises the significance of material objects to the construction maintenance and collapse of networks of various forms which are central to explanations of cultural contact and change Focusing on the materiality of objects and on the way in which materials are used adds a multidimensional quality to networks The properties functions and styles of different materials are intrinsically linked to the way in which knowledge flows and technologies are transmitted Transmission of technologies from one craft to another is one of the main drivers of innovation whilst sharing knowledge is enabled and limited by the extent of associated social networks in place Archaeological research has often been limited to studying objects made of one particular material in depth be it lithic materials ceramics textiles glass metal wood or others The

knowledge flow and transfer between crafts that deal with different materials have often been overlooked This book takes a fresh approach to the reconstruction of knowledge networks by integrating two or more craft traditions in each of its chapters The authors well known experts and early career researchers provide concise case studies that cover a wide range of materials The scope of the book extends from networks of craft traditions to implications for society in a wider sense materials objects and the technologies used to make and distribute them are interwoven with social meaning People make objects but objects make people the materiality of objects shapes our understanding of the world and our place within it In this book objects are treated as clues to social networks of different sorts that can be contrasted and compared both spatially and diachronically
