Symbolic And Knowledge Based Signal Processing:

Symbolic and Knowledge-based Signal Processing Alan V. Oppenheim, Syed Hamid Nawab, 1992 Aimed at signal processors and computer scientists this book of self contained discussions explores how computer science can enhance the performance of signal processing systems and their design Handbook of VLSI Chip Design and Expert Systems A. F. Schwarz, 2014-05-10 Handbook of VLSI Chip Design and Expert Systems provides information pertinent to the fundamental aspects of expert systems which provides a knowledge based approach to problem solving This book discusses the use of expert systems in every possible subtask of VLSI chip design as well as in the interrelations between the subtasks Organized into nine chapters this book begins with an overview of design automation which can be identified as Computer Aided Design of Circuits and Systems CAD/CAS This text then presents the progress in artificial intelligence with emphasis on expert systems Other chapters consider the impact of design automation which exploits the basic capabilities of computers to perform complex calculations and to handle huge amounts of data with a high speed and accuracy This book discusses as well the characterization of microprocessors The final chapter deals with interactive I/O devices This book is a valuable resource for system design experts circuit analysts and designers logic designers device engineers technologists and application specific designers **Rapid Prototyping of Application Specific Signal Processors** Mark A. Richards, Anthony J. Gadiant, Geoffrey A. Frank, 1997-02-28 Rapid Prototyping of Application Specific Signal Processors presents leading edge research that focuses on design methodology infrastructure support and scalable architectures developed by the 150 million dollar DARPA United States Department of Defense RASSP Program The contributions to this edited work include an introductory overview chapter that explains the origin concepts and status of this effort The RASSP Program is a multi year DARPA Tri Service initiative intended to dramatically improve the process by which complex digital systems particularly embedded signal processors are designed manufactured upgraded and supported This program was originally driven by military applications for signal processing The requirements of military applications for real time signal processing are typically more demanding than those of commercial applications but the time gap between technology employed in advanced military prototypes and commercial products is narrowing rapidly The research on methodologies infrastructure and architectures presented in this book is applicable to commercial signal processing systems that are in design now or will be developed before the end of the decade Rapid Prototyping of Application Specific Signal Processors is a valuable reference for developers of embedded digital systems particularly systems engineers for signal processing systems such as digital TV biomedical image processing systems and telecommunications and for military contractors who are developing signal processing systems This book will also be of interest to managers who are charged with responsibility for creating and maintaining environments and infrastructures for developing large embedded digital systems The chief value for managers will be the defining of methods and processes that reduce development time and cost Modern

Communications Receiver Design and Technology Cornell Drentea, 2010 This comprehensive sourcebook thoroughly explores the state of the art in communications receivers providing detailed practical guidance for constructing an actual high dynamic range receiver from system design to packaging You also find clear explanations of the technical underpinnings that you need to understand for your work in the field This cutting edge reference presents the latest information on modern superheterodyne receivers dynamic range mixers oscillators complex coherent synthesizers automatic gain control DSP and software radios You find in depth discussions on system design including coverage of all pertinent data and tools Moreover the book offers you a solid understanding of packaging and mechanical considerations as well as a look at tomorrow's receiver technology including new Bragg cell applications for ultra wideband electronic warfare receivers This one stop resource is packed with over 300 illustrations that support critical topics throughout Computational Auditory Scene

Analysis David F. Rosenthal, Hiroshi G. Okuno, Hiroshi Okuno, David Rosenthal, 2021-02-01 The interest of AI in problems related to understanding sounds has a rich history dating back to the ARPA Speech Understanding Project in the 1970s While a great deal has been learned from this and subsequent speech understanding research the goal of building systems that can understand general acoustic signals continuous speech and or non speech sounds from unconstrained environments is still unrealized Instead there are now systems that understand clean speech well in relatively noiseless laboratory environments but that break down in more realistic noisier environments As seen in the cocktail party effect humans and other mammals have the ability to selectively attend to sound from a particular source even when it is mixed with other sounds Computers also need to be able to decide which parts of a mixed acoustic signal are relevant to a particular purpose which part should be interpreted as speech and which should be interpreted as a door closing an air conditioner humming or another person interrupting Observations such as these have led a number of researchers to conclude that research on speech understanding and on nonspeech understanding need to be united within a more general framework Researchers have also begun trying to understand computational auditory frameworks as parts of larger perception systems whose purpose is to give a computer integrated information about the real world Inspiration for this work ranges from research on how different sensors can be integrated to models of how humans auditory apparatus works in concert with vision proprioception etc
