Symmetry In Finite Generalized Quadrangles:

Symmetry in Finite Generalized Quadrangles Koen Thas, 2004-01-26 This monograph classifies finite generalized quadrangles by symmetry generalizing the celebrated Lenz Barlotti classification for projective planes The book introduces combinatorial geometrical and group theoretical concepts that arise in the classification and in the general theory of finite generalized quadrangles including automorphism groups elation and translation generalized quadrangles generalized ovals and generalized ovoids span symmetric generalized quadrangles flock geometry and property G regularity and nets split BN pairs of rank 1 and the Moufang property Finite Geometries, Groups, and Computation Alexander Hulpke, Robert Liebler, Tim Penttila, Akos Seress, 2008-08-22 This volume is the proceedings of a conference on Finite Geometries Groups and Computation that took place on September 4 9 2004 at Pingree Park Colorado a campus of Colorado State University Not accidentally the conference coincided with the 60th birthday of William Kantor and the topics relate to his major research areas Participants were encouraged to explore the deeper interplay between these fields The survey papers by Kantor O'Brien and Penttila should serve to introduce both students and the broader mathematical community to these important topics and some of their connections while the volume as a whole gives an overview of current developments in these fields

Translation Generalized Quadrangles Joseph Adolf Thas, Koen Thas, H. van Maldeghem, 2006 Translation generalized quadrangles play a key role in the theory of generalized quadrangles comparable to the role of translation planes in the theory of projective and affine planes The notion of translation generalized quadrangle is a local analogue of the more global OC Moufang Condition OCO a topic of great interest also due to the classification of all Moufang polygons Attention is thus paid to recent results in that direction but also many of the most important results in the general theory of generalized quadrangles that appeared since 1984 are treated Translation Generalized Quadrangles is essentially self contained as the reader is only expected to be familiar with some basic facts on finite generalized quadrangles Proofs that are either too long or too technical are left out or just sketched The three standard works on generalized quadrangles are co authored by the writers of this book OC Finite Generalized Quadrangles OCO 1984 by S E Payne and J A Thas OC Generalized Polygons OCO 1998 by H Van Maldeghem and OC Symmetry in Finite Generalized Quadrangles OCO 2004 by K Thas Sample Chapter s Chapter 1 Generalized Quadrangles 127 KB Contents Generalized Quadrangles Regularity Antiregularity and 3 Regularity Elation and Translation Generalized Quadrangles Generalized Quadrangles and Flocks Good Eggs Generalized Quadrangles Nets and the Axiom of Veblen Ovoids and Subquadrangles Translation Generalized Ovals Moufang Sets and Translation Moufang Sets Configurations of Translation Points Moufang Quadrangles with a Translation Point Translation Ovoids in Translation Quadrangles Translation Generalized Quadrangles in Projective Space Open Problems Readership Researchers in incidence geometry combinatorics and finite geometries Also suitable as a textbook for a graduate course **Finite Generalized Quadrangles** Stanley E. Payne, Joseph Adolf Thas, 2009 Generalized quadrangles GQ were formally introduced

by J Tits in 1959 to describe geometric properties of simple groups of Lie type of rank 2 The first edition of Finite Generalized Quadrangles FGQ quickly became the standard reference for finite GQ The second edition is essentially a reprint of the first edition It is a careful rendering into LaTeX of the original along with an appendix that brings to the attention of the reader those major new results pertaining to GQ especially in those areas where the authors of this work have made a contribution The first edition has been out of print for many years The new edition makes available again this classical reference in the rapidly increasing field of finite geometries

A Course on Elation Quadrangles Koen Thas, 2012 The notion of elation generalized quadrangle is a natural generalization to the theory of generalized quadrangles of the important notion of translation planes in the theory of projective planes Almost any known class of finite generalized quadrangles can be constructed from a suitable class of elation quadrangles In this book the author considers several aspects of the theory of elation generalized quadrangles Special attention is given to local Moufang conditions on the foundational level exploring for instance Knarr's question from the 1990s concerning the very notion of elation quadrangles All the known results on Kantor's prime power conjecture for finite elation quadrangles are gathered some of them published here for the first time The structural theory of elation quadrangles and their groups is heavily emphasized Other related topics such as p modular cohomology Heisenberg groups and existence problems for certain translation nets are briefly touched This book starts from scratch and is essentially self contained Many alternative proofs are given for known theorems This course contains dozens of exercises at various levels from very easy to rather difficult and will stimulate undergraduate and graduate students to enter the fascinating and rich world of elation quadrangles More accomplished mathematicians will find the final chapters especially challenging

General Galois Geometries James Hirschfeld, Joseph A. Thas, 2016-02-03 This book is the second edition of the third and last volume of a treatise on projective spaces over a finite field also known as Galois geometries This volume completes the trilogy comprised of plane case first volume and three dimensions second volume This revised edition includes much updating and new material It is a mostly self contained study of classical varieties over a finite field related incidence structures and particular point sets in finite n dimensional projective spaces General Galois Geometries is suitable for PhD students and researchers in combinatorics and geometry The separate chapters can be used for courses at postgraduate level

Generalized Analytic Automorphic Forms in Hypercomplex Spaces Rolf S. Krausshar, 2004-02-23 This book offers basic theory on hypercomplex analytic automorphic forms and functions for arithmetic subgroups of the Vahlen group in higher dimensional spaces Vector and Clifford algebra valued Eisenstein and Poincaré series are constructed within this framework and a detailed description of their analytic and number theoretical properties is provided It establishes explicit relationships to generalized variants of the Riemann zeta function and Dirichlet L series and introduces hypercomplex multiplication of lattices

Finite Geometries Johnson, 1983-01-18

Complex Convexity and Analytic Functionals Mats Andersson, Mikael Passare, Ragnar Sigurdsson, 2004-04-23 Puts theory of complex linear convexity on a

solid footing and gives a survey of its status Applications include the Fantappie transformation of analytic functionals integral representation formulas polynomial interpolation and solutions to linear partial differential equations *Finite Geometries* Aart Blokhuis,James W.P. Hirschfeld,Dieter Jungnickel,Joseph A. Thas,2013-12-01 When These are the proceedings of Finite Geometries the Fourth Isle of Thorns Conference which took place from Sunday 16 to Friday 21 July 2000 It was organised by the editors of this volume The Third Conference in 1990 was published as *Advances in Finite Geometries and Designs* by Oxford University Press and the Second Conference in 1980 was published as *Finite Geometries and Designs* by Cambridge University Press The main speakers were A R Calderbank P J Cameron C E Praeger B Schmidt H Van Maldeghem There were 64 participants and 42 contributions all listed at the end of the volume Conference web site <http://www.maths.susx.ac.uk/Staff/JWPH/> Why This collection of 21 articles describes the latest research and current state of the art in the following inter linked areas combinatorial structures in finite projective and affine spaces also known as Galois geometries in which combinatorial objects such as blocking sets spreads and partial spreads ovoids arcs and caps as well as curves and hypersurfaces are all of interest geometric and algebraic coding theory finite groups and incidence geometries as in polar spaces generalized polygons and diagram geometries algebraic and geometric design theory in particular designs which have interesting symmetric properties and difference sets which play an important role because of their close connections to both Galois geometry and coding theory
