The Closed Graph and P-Closed Graph Properties in General Topology T. R. Hamlett, L. L. Herrington, **The Closed Graph and P-closed Graph Properties in General Topology** T. R. Hamlett, L. L. Herrington, 1981 The authors purpose in writing this paper is to provide an elementary exposition of the results relating to functions with closed and p closed graphs in a setting of general topology *Canadian Mathematical Bulletin*, 1989-12 Symposium on Algebraic Topology in Honor of Jose Adem Samuel Gitler, 1982 **Azumaya Algebras, Actions, and Modules** Darrell Haile, 1992 This volume contains the proceedings of a conference in honor of Goro Azumaya's seventieth birthday held at Indiana University of Bloomington in May 1990 Professor Azumaya who has been on the faculty of Indiana University since 1968 has made many important contributions to modern abstract algebra His introduction and investigation of what have come to be known as Azumaya algebras subsequently stimulated much research on such rings and algebras as well as applications to geometry and number theory In addition to honoring Professor Azumaya's contributions the conference was intended to stimulate interaction among three areas of his research interests Azumaya algebras group and Hopf algebra actions and module theory Aimed at researchers in algebra this volume contains contributions by some of the leaders in these areas *Proceedings of the Northwestern Homotopy Theory Conference* Haynes R. Miller, Stewart Priddy, 1983 **Barrelled Locally Convex Spaces** P. Pérez Carreras, J. Bonet, 1987-03-01 This book is a systematic treatment of barrelled spaces and of structures in which barrelledness conditions are significant It is a fairly self contained study of the structural theory of those spaces concentrating on the basic phenomena in the theory and presenting a variety of functional analytic techniques Beginning with some basic and important results in different branches of Analysis the volume deals with Baire spaces presents a variety of techniques and gives the necessary definitions exploring conditions on discs to ensure that they are absorbed by the barrels of the space The abstract theory of barrelled spaces is then presented as well as local completeness and its applications to the inheritance of the Mackey topology to subspaces Further discussed is the abstract study of bornological and ultrabornological spaces B and B_r completeness inductive limits strong barrelledness conditions characterizations of barrelled bornological and DF spaces in the context of spaces of type $C(X)$ the stability of barrelledness conditions of topological tensor products and the related questions of commutability of inductive limits and tensor products and the holomorphically significant properties of locally convex spaces as developed by Nachbin and others Conference on Modern Analysis and Probability Richard Beals, 1984 An NSF supported conference in honor of Professor Shizuo Kakutani was held on June 8-11 1982 at Yale University on the occasion of Kakutani's retirement The three major areas of mathematics on which the conference focused were functional analysis probability theory and ergodic theory **Combinatorial Methods in Topology and Algebraic Geometry** John R. Harper, Richard Mandelbaum, 1985 This collection marks the recent resurgence of interest in combinatorial methods resulting from their deep and diverse applications both in topology

and algebraic geometry Nearly thirty mathematicians met at the University of Rochester in 1982 to survey several of the areas where combinatorial methods are proving especially fruitful topology and combinatorial group theory knot theory 3 manifolds homotopy theory and infinite dimensional topology and four manifolds and algebraic surfaces This material is accessible to advanced graduate students with a general course in algebraic topology along with some work in combinatorial group theory and geometric topology as well as to established mathematicians with interests in these areas For both student and professional mathematicians the book provides practical suggestions for research directions still to be explored as well as the aesthetic pleasures of seeing the interplay between algebra and topology which is characteristic of this field In several areas the book contains the first general exposition published on the subject In topology for example the editors have included M Cohen W Metzler and K Sauerman s article on Collapses of K times I and group presentations and Metzler s On the Andrews Curtis Conjecture and related problems In addition J M Montesino has provided summary articles on both 3 and 4 manifolds

Topological Methods in Nonlinear Functional Analysis Sankatha Prasad Singh, S. Thomeier, B. Watson, 1983 Covers the proceedings of the session on Fixed Point Theory and Applications held at the University of Toronto August 21-26 1982 This work presents theorems on the existence of fixed points of nonexpansive mappings and the convergence of the sequence of iterates of nonexpansive and quasi nonexpansive mappings
