The Collected Papers Of Albert Einstein Vol 3 The Swiss Years Writings 1909 1911:

The collected papers of Albert Einstein Albert Einstein,1993 **The Collected Papers of Albert Einstein** ,1994

This volume of The Collected Papers of Albert Einstein presents Einstein's writings for the two year period starting in October 1909. The initial date marks Einstein's departure from the Swiss Patent Office at Bern which had been his professional home for seven years and the beginning of his first academic appointment at the University of Zurich. The volume concludes with the masterful report that Einstein by then a full professor at the German language university in Prague gave to the original Solvay Congress the first international meeting devoted to the problems of radiation and the quantum theory. Most of Einstein's efforts during these years went into his struggle with these ever more perplexing problems of quanta on which he made discouragingly little progress. Einstein's new academic career naturally required him to teach and almost half of this volume consists of the previously unpublished notes he wrote in preparation for his lectures on mechanics on electricity and magnetism and on kinetic theory and statistical mechanics. The last of these is particularly interesting in reflecting some of his research interests. Several papers here are concerned with aspects of the special theory of relativity but it is Einstein's article of June 1911 that is a harbinger of things to come; it contains his calculation of the bending of light in a gravitational field on the basis of his equivalence principle. Martin J. Klein is Bass Professor of the History of Science and Professor of Physics at Yale University and Senior Editor of The Collected Papers of Albert Einstein. A. J. Kox teaches history of science at the University of Amsterdam. Jürgen Renn is Assistant Professor of Philosophy and Physics at Boston University and Robert Schulmann is Assistant Professor of History at Boston University.
