Bowen,Sarah A. Levin,2011-06-27 In *Reclaiming the Game* William Bowen and Sarah Levin disentangle the admissions and academic experiences of recruited athletes walk on athletes and other students In a field overwhelmed by reliance on anecdotes the factual findings are striking and sobering Anyone seriously concerned about higher education will find it hard to wish away the evidence that athletic recruitment is problematic even at those schools that do not offer athletic scholarships Thanks to an expansion of the College and Beyond database that resulted in the highly influential studies *The Shape of the River* and *The Game of Life* the authors are able to analyze in great detail the backgrounds academic qualifications and college outcomes of athletes and their classmates at thirty three academically selective colleges and universities that do not offer athletic scholarships They show that recruited athletes at these schools are as much as four times more likely to gain admission than are other applicants with similar academic credentials The data also demonstrate that the typical recruit is substantially more likely to end up in the bottom third of the college class than is either the typical walk on or the student who does not play college sports Even more troubling is the dramatic evidence that recruited athletes underperform they do even less well academically than predicted by their test scores and high school grades Over the last four decades the athletic academic divide on elite campuses has widened substantially This book examines the forces that have been driving this process and presents concrete proposals for reform At its core *Reclaiming the Game* is an argument for re establishing athletics as a means of fulfilling instead of undermining the educational missions of our colleges and universities

Preparing Your Child for College ,1996 Gender and Fair Assessment Warren W. Willingham,Nancy S. Cole,2013-12-16 There have been many important changes in the participation of women and men in American society over the past quarter century Tests play a role in those changes by providing evidence of the diverse achievement and proficiency of women and men They aid the learning process and reflect inequalities in opportunity to learn and participate In addition they provide useful information in considering what alternatives in education and work make most sense for individuals and influence views about groups of students educational programs and a wide range of issues For all of these reasons it is important that tests assess fairly and reflect accurately the ways young people are and are not achieving as well as desired The test performance of women and men is a research topic of historical interest and has received much attention in recent

years Because of this increased interest there is a great deal of new research and data available The purpose of the study presented in this volume was to review this new information with two objectives in mind to clarify patterns of gender difference and similarity in test performance and related achievements and to see what implications those findings might have for fair assessment and as a corollary examine the assessment process as a possible source of gender differences This study is interested in tests used in education to assess developed knowledge and skill In order to gain a broader view of gender similarity and difference the contributors looked at other types of measures and other characteristics of young women and men Their hope is to contribute to a firmer basis for insuring fairness in tests an objective which is particularly important as the field moves increasingly to new forms of assessment in which there is less experience
