The Columbia Sustaining A Modern Resource:

Endangered Rivers and the Conservation Movement Tim Palmer, 2004-02-09 A dam proposal sparked the first great conservation battle in the United States when John Muir fought to safeguard Hetch Hetchy Valley in Yosemite National Park. Since then people have worked to preserve free flowing rivers from Florida to Alaska and in doing so they have changed the way natural resources are managed in America. In *Endangered Rivers* Tim Palmer traces the growth of this movement and he chronicles the development of a national consciousness that values our rivers as lifelines for wildlife, fisheries, parks, wilderness recreation and communities. Based on careful research and hundreds of interviews, Palmer's information packed narrative is regarded as a classic in the field of conservation. The first edition of this book is now updated and includes two new chapters that chart the course of conservation during the past twenty years and explore how the movement to protect rivers will likely change in the twenty first century. This book will fascinate all who care about rivers and it will engage those who seek to understand environmental history, resources management and the evolution of government programs in response to people's changing needs.

Lifelines Tim Palmer, 2004-01-29 *Lifelines* chronicles the value of rivers, documents the modern day problems affecting them and reports on key solutions for better stewardship.

Fish and Wildlife Implementation Plan, 2003

On the River With Lewis and Clark Verne Huser, 2004 On their remarkable journey across the North American continent Meriwether Lewis and William Clark's Corps of Discovery traveled almost ten thousand miles, about nine thousand of them on rivers. With an expert's eye Verne Huser tells us what it was like to mount and carry out such an expedition. 52 photographs, 4 line drawings, map.

Land, Water and Development Malcolm Newson, 2008-09-17 Water is newsworthy: there is or will be a world water crisis. Aggravated by climate change we are approaching the limits of human exploitation of freshwater resources, notably in growing essential food. The complexities and uncertainties associated with improving our management of fresh water take the potential remedies out of the hands of simple local hard engineering and into much larger units: the basin, the ecosystem and the global context and also require longer term perspectives. The Third Edition follows the same structure as its predecessors, presenting the historical and scientific backgrounds to land water interactions and establishing the links with development processes and policies. Throughout its two major messages are that our new philosophy should be one of humans in the ecosystem and that the guidance from science, being uncertain and contested, must be operationalized in a participatory system of governance based on participation. Following a review of progress towards these elements in the developed world, the international case studies update the situation in the developing world following the Millennium Development Goals, our new emphasis on poverty and on global food supplies. This book covers the multitude of scientific research findings, development of tools and spatial/temporal scale challenges which have emerged in the last decade. Tensions are highlighted in the current and future role of large dams; country studies are retained and considerably updated and development contexts are explored in greater depth as a dividing line in capacity to cope with

land and water stress Technical issues have been expanded to cover major droughts environmental flows and the restoration of rivers and wetlands A separate chapter picks up these themes under terms of their relationship with uncertainty and the widespread perception that a new ethos of adaptive management is needed in the water sector For students of geography environmental science hydrology and development studies this innovative edition provides a reasoned academic basis of evidence for sustainable adaptive management of rivers and related large scale ecosystems using more than 600 new sources It will also prove invaluable for lecturers and practitioners
