Alongside updated accounts of the topics covered in the first edition it includes 17 new chapters on subjects such as semantic role labelling, text-to-speech synthesis, translation technology, opinion mining and sentiment analysis, and the application of Natural Language Processing in educational and biomedical contexts among many others. The volume is divided into four parts that examine respectively the linguistic fundamentals of computational linguistics, the methods and resources used such as statistical modelling, machine learning and corpus annotation, key language processing tasks including text segmentation, anaphora resolution and speech recognition, and the major applications of Natural Language Processing from machine translation to author profiling. The book will be an essential reference for researchers and students in computational linguistics and Natural Language Processing as well as those working in related industries **Logic, Language, and Computation** Balder D. ten Cate, Henk W. However, there are various other threads that can be followed which may be supported by the rich linguistic knowledge implicitly stored in parallel resources. Bitexts have been explored in lexicography, word sense disambiguation, terminology

extraction computer aided language learning and translation studies to name just a few The book covers the essential tasks that have to be carried out when building parallel corpora starting from the collection of translated documents up to sub-sentential alignments In particular it describes various approaches to document alignment sentence alignment word alignment and tree structure alignment It also includes a list of resources and a comprehensive review of the literature on alignment techniques Table of Contents Introduction Basic Concepts and Terminology Building Parallel Corpora Sentence Alignment Word Alignment Phrase and Tree Alignment Concluding Remarks

Grammatical theory Stefan Müller, 2020-09-28 This book introduces formal grammar theories that play a role in current linguistic theorizing Phrase Structure Grammar Transformational Grammar Government Binding Generalized Phrase Structure Grammar Lexical Functional Grammar Categorical Grammar Head Driven Phrase Structure Grammar Construction Grammar Tree Adjoining Grammar The key assumptions are explained and it is shown how the respective theory treats arguments and adjuncts the active-passive alternation local reorderings verb placement and fronting of constituents over long distances The analyses are explained with German as the object language The second part of the book compares these approaches with respect to their predictions regarding language acquisition and psycholinguistic plausibility The nativism hypothesis which assumes that humans possess genetically determined innate language specific knowledge is critically examined and alternative models of language acquisition are discussed The second part then addresses controversial issues of current theory building such as the question of flat or binary branching structures being more appropriate the question whether constructions should be treated on the phrasal or the lexical level and the question whether abstract non-visible entities should play a role in syntactic analyses It is shown that the analyses suggested in the respective frameworks are often translatable into each other The book closes with a chapter showing how properties common to all languages or to certain classes of languages can be captured The book is a translation of the German book Grammatiktheorie which was published by Stauffenburg in 2010 This book is a new edition of <http://langsci.press.org/catalog/book/25> <http://langsci.press.org/catalog/book/195> and <http://langsci.press.org/catalog/book/255>
