Svantesson, 2017-10-06 Internet jurisdiction has emerged as one of the greatest and most urgent challenges online affecting areas as diverse as e commerce data privacy law enforcement content take downs cloud computing e health cyber security intellectual property freedom of speech and cyberwar In this innovative book Professor Svantesson presents a vision for a new approach to Internet jurisdiction based on an extensive period of research dedicated

to the topic The book demonstrates that our current paradigm remains attached to territorial thinking that is out of sync with our modern world especially but not only online Having made the claim that our adherence to the territoriality principle is based more on habit rather than on any clear and universally accepted legal principles Professor Svantesson advances a new jurisprudential framework for how we approach jurisdiction a framework that unites private and public international law He also proposes several other reform initiatives aimed at equipping us to solve the Internet jurisdiction puzzle In addition the book provides a history of Internet jurisdiction and challenges our traditional categorisation of different types of jurisdiction It places Internet jurisdiction in a broader context and outlines methods for how to properly understand and work with rules of Internet jurisdiction While Solving the Internet Jurisdiction Puzzle paints a clear picture of the concerns involved and the problems that needs to be overcome this book is distinctly aimed at finding practical solutions anchored in a solid theoretical framework Professor Svantesson argues that many of the Internet jurisdiction problems we face are due to a sleepwalking like acceptance of orthodox thinking Solving the Internet Jurisdiction Puzzle acts as a wake up call to this issue

Rubenstein, 2009-11-02 Too many high school students faced with mathematics in courses at the level of algebra and beyond find themselves struggling with abstract concepts and unwilling to pursue further study of mathematics When students curtail their course taking in mathematics they may be impacting their college and career options Thus high school mathematics teachers have the responsibility to help students recognize the value and importance of mathematics while also designing instruction that makes mathematics accessible to all students Ball and Bass 2000 as well as other mathematics educators have recognized that mathematics teachers not only need to know mathematics content and mathematics pedagogy i e teaching strategies but they also need to know how these ideas are integrated This mathematical knowledge for teaching is the knowledge that teachers of mathematics need and it differs from the knowledge that research or applied mathematicians must know This text is designed to provide teachers with insights into this mathematical knowledge for teaching Teaching and Learning High School Mathematics is likely different from many other texts that you have used It integrates both content and pedagogy to help you develop and build your own understanding of teaching The text is designed to help you develop deep conceptual understanding of fundamental mathematics Ma 1999 so that you are able to approach mathematics from multiple perspectives with many tools Such flexibility in teaching is essential if teachers are to help all students become mathematically proficient Throughout this book you are encouraged to work in cooperative teams This strategy is designed to help you develop a mathematics learning community and build a professional network that will be a valuable resource during your professional career Hopefully you will experience the benefits of engaging in rich mathematical discussions with peers and consider how to encourage such learning environments in your own classrooms Lesson planning is another element pervasive throughout this text To help teachers plan for effective student centered lessons the Question Response Support QRS Guide is introduced in Lesson 1 1 and used throughout the remainder of the lessons The QRS Guide is a tool on which teachers may record tasks or questions Q for students expected and observed student responses R and teacher support S in the form of additional just enough questions to support students in their progress on the task In each unit teachers expand their repertoire of teaching and learning elements and strategies and

incorporate these elements as they plan additional lesson segments In Unit 4 lesson planning is formally introduced as teachers put together elements from previous units into complete cohesive lesson plans
