

Diseases of Muscular System

Sprains

Ankle ligament ruptures are typically the result of a sudden motion of the foot. Future discomfort and swelling could be avoided with the use of rehabilitation treatments.

Strain

A pulled bicep is the result of overstretching and tearing the tendons and/or muscle fibres in the biceps. Pain and edema are possible complications.

Bruise

A bruise is the medical word for a cut or rupture in the muscular tissue. Symptoms include swelling and a rise in pressure around the muscle that has been injured.

Cancer Of The Muscle

This disorder, which can impair the calf muscle, is extremely uncommon. Cancer of the calf muscles is called sarcoma in the medical community.

The NeuroMuscular System: From Earth to Space
Life Science Dieter Blottner, Michele Salanova, 2014-11-25 The book provides fundamental new insights in the structure and function of the healthy NeuroMuscular system Recent findings suggest that the musculoskeletal system that supports movement control on Earth is controlled by unique principles of structural biochemical and molecular characteristics Mechanical loading by working against normal gravity helps to support principal structures in bone muscle and associated subcellular scaffold components Disuse or immobilization of the body in bed rest on Earth or in microgravity in Space result in considerable loss of bone muscle and force with downregulation of neuromuscular activity resulting in impaired performance control The goal is to develop exercise prescriptions to maintain postural control in normal life aging and rehabilitation on Earth as well as for an adequate human performance management in Space

Molecular Nutrition and Diabetes Didac Mauricio, 2015-12-08 Molecular Nutrition and Diabetes A Volume in the Molecular Nutrition Series focuses on diabetes as a nutritional problem and its important metabolic consequences Fuel metabolism and dietary supply all influence the outcome of diabetes but understanding the pathogenesis of the diabetic process is a prelude to better nutritional control Part One of the book provides general coverage of nutrition and diabetes in terms of dietary patterns insulin resistance and the glucose insulin axis while Part Two presents the molecular biology of diabetes and focuses on areas such as oxidative stress mitochondrial function insulin resistance high fat diets nutraceuticals and lipid accumulation Final sections explore the genetic machinery behind diabetes and diabetic metabolism including signaling pathways gene expression genome wide association studies and specific gene expression While the main focus of each chapter is the basic and clinical research on diabetes as a nutritional problem all chapters also end with a translational section on the implications for the nutritional control of diabetes Offers updated information and a perspective on important future developments to different professionals involved in the basic and clinical research on all major nutritional aspects of diabetes mellitus Explores how nutritional factors are involved in the pathogenesis of both type1 and type2 diabetes and their complications Investigates the molecular and genetic bases of diabetes and diabetic metabolism through the lens of a rapidly evolving field of molecular nutrition *Polyamine Metabolism in Disease and Polyamine-Targeted Therapies* Tracy Murray-Stewart, 2019-10-01 Polyamines are ubiquitous polycations essential for all cellular life The most common polyamines in eukaryotes spermine spermidine and putrescine exist in millimolar intracellular concentrations that are tightly regulated through biosynthesis catabolism and transport Polyamines interact with and regulate negatively charged macromolecules including nucleic acids proteins and ion channels Accordingly alterations in polyamine metabolism affect cellular

proliferation and survival through changes in gene expression and transcription translation autophagy oxidative stress and apoptosis Dysregulation of these multifaceted polyamine functions contribute to multiple disease processes thus their metabolism and function have been targeted for preventive or therapeutic intervention The correlation between elevated polyamine levels and cancer is well established and ornithine decarboxylase the rate limiting biosynthetic enzyme in the production of putrescine is a bona fide transcriptional target of the Myc oncogene Furthermore induced polyamine catabolism contributes to carcinogenesis that is associated with certain forms of chronic infection and or inflammation through the production of reactive oxygen species These and other characteristics specific to cancer cells have led to the development of polyamine based agents and inhibitors aimed at exploiting the polyamine metabolic pathway for chemotherapeutic and chemopreventive benefit In addition to cancer polyamines are involved in the pathologies of neurodegenerative diseases including Alzheimer s and Parkinson s parasitic and infectious diseases wound healing ischemia reperfusion injuries and certain age related conditions as polyamines are known to decrease with age As in cancer polyamine based therapies for these conditions are an area of active investigation With recent advances in immunotherapy interest has increased regarding polyamine associated modulation of immune responses as well as potential immunoregulation of polyamine metabolism the results of which could have relevance to multiple disease processes The goal of this Special Issue of Medical Sciences is to present the most recent advances in polyamine research as it relates to health disease and or therapy
