Observational Constraints on the Influence of Active Galactic Nuclei on the Evolution of Galaxies Christopher Mark Harrison, 2016-01-20 This prize winning Ph D thesis by Chris Harrison adopts a multi faceted approach to address the lack of decisive observational evidence utilising large observational data sets from several world leading telescopes Developing several novel observational techniques Harrison demonstrated that energetic winds driven by Active Galactic Nuclei AGN are found in a large number of galaxies with properties in agreement with model predictions One of the key unsolved problems in astrophysics is understanding the influence of AGN the sites of growing supermassive black holes on the evolution of galaxies Leading theoretical models predict that AGN drive energetic winds into galaxies regulating the formation of stars However until now we have lacked the decisive observational evidence to confirm or refute these key predictions Careful selection of targets allowed Harrison to reliably place these detailed observations into the context of the overall galaxy population However in disagreement with the model predictions Harrison showed that AGN have little global effect on star formation in galaxies Theoretical models are now left with the challenge of explaining these results

Handbook of CCD Astronomy Steve B. Howell, 2000-04-24 Charge Coupled Devices CCDs are the state of the art detector in many areas of observational science Astronomy physics chemistry medical imaging and remote sensing are just a few of the fields of study in which they play a crucial role This handbook provides a concise and accessible reference on all practical aspects of using CCDs Starting with the electronic workings of CCDs this handbook discusses their basic characteristics and then gives methods and examples of how to determine these values While the focus of the book is on the use of CCDs in professional observational astronomy advanced amateur astronomers and researchers in physics chemistry medical imaging and remote sensing will also find it very valuable Tables of useful and hard to find data and key practical equations round off the book and ensure that it provides an ideal introduction to the practical use of CCDs for graduate students and a handy reference for more experienced users

Architecture Simon Unwin, 2020-12-29 Now in its fifth edition *Analysing Architecture* has become internationally established as the best introduction to architecture. Aimed primarily at those studying architecture, it offers a clear and accessible insight into the workings of this rich and fascinating subject. With copious illustrations from his own notebooks, the author dissects examples from around the world and all periods of history to explain the underlying strategies in architectural design and show how drawing may be used as a medium for analysis. In this new edition *Analysing Architecture* has been revised and expanded. Notably the chapter on How Analysis Can Help Design has been redeveloped to clearly explain this crucially important aspect of study to a beginner readership. Four new chapters have been added to the section dealing with Themes in Spatial Organisation on Axis Grid Datum Place and Hidden Material from the Case Studies in previous editions has been redistributed amongst earlier chapters. The Introduction has been completely rewritten and the format of the whole book has been adjusted to allow for the inclusion of more and better illustrative examples. Works of architecture are instruments for managing orchestrating modifying our relationship with the world around us. They frame just about everything we do. Architecture is complex subtle frustrating but ultimately extremely rewarding. It can be a difficult discipline to get to grips with; nothing in school quite prepares anyone for the particular demands of an architecture course. But this book will help. www.instagram.com/analysingarchitecture

On Not Looking Frances Guerin, 2015-01-09 On Not Looking The Paradox

of Contemporary Visual Culture focuses on the image and our relationship to it as a site of not looking. The collection demonstrates that even though we live in an image saturated culture many images do not look at what they claim. Viewers often do not look at the images and in other cases we are encouraged by the context of exhibition not to look at images. Contributors discuss an array of images: photographs, films, videos, press images, digital images, paintings, sculptures, and drawings from everyday life, museums and galleries, and institutional contexts such as the press and political arena. The themes discussed include politics of institutional exhibition and perception of images, censored, repressed, and banned images, transformations to practices of not looking as a result of new media interventions, images in history and memory, not looking at images of bodies and cultures on the margins, responses to images of trauma and embodied vision.

Brown Dwarf Companions to Young Solar an Stanimir Metchev, 2006-02. We present results from an adaptive optics survey conducted with the Palomar and Keck telescopes over 3 years which measured the frequency of stellar and sub stellar companions to Sun like stars. The survey sample contains 266 stars in the 3 10000 million year age range at heliocentric distances between 8 and 200 parsecs and with spectral types between F5 K5. A sub sample of 101 stars between 3 500 million years old were observed in deep exposures with a coronagraph to search for faint sub stellar companions. A total of 288 candidate companions were discovered around the sample stars which were re imaged at subsequent epochs to determine physical association with the candidate host stars by checking for common proper motion. Benefitting from a highly accurate astrometric calibration of the observations we were able to successfully apply the common proper motion test in the majority of the cases including stars with proper motions as small as 20 milli arcseconds year. The results from the survey include the discovery of three new brown dwarf companions HD 49197B, HD 203030B and ScoPMS 214B, 43 new stellar binaries and a triple system. The physical association of an additional a priori suspected candidate sub stellar companion to the star HII 1348 is astrometrically confirmed. The newly discovered and confirmed young brown dwarf companions span a range of spectral types between M5 and T0.5 and will be of prime significance for constraining evolutionary models of young brown dwarfs and extra solar planets. Based on the 3 new detections of sub stellar companions in the 101 star sub sample and following a careful estimate of the survey incompleteness a Bayesian statistical analysis shows that the frequency of 0.012 ± 0.072 solar mass brown dwarfs in 30 1600 AU orbits around young solar analogs is 6.8% ± 4.9% ± 8.3% 2 sigma limits. While this is a factor of 3 lower than the frequency of stellar companions to G dwarfs in the same orbital range it is significantly higher than the frequency of brown dwarfs in 0.3 AU orbits discovered through precision radial velocity surveys. It is also fully consistent with the observed frequency of 0.3 AU extra solar planets. Thus the result demonstrates that the radial velocity brown dwarf desert does not extend to wide separations contrary to previous belief.

The Formation of Galactic Bulges C. Marcella Carollo, Henry C. Ferguson, Rosemary F. G. Wyse, 1999. Bulges lie at the center of spiral galaxies. Until recently they were thought to host uniquely old stellar populations and thus provide a key for understanding galaxy formation. Recent

observations from the ground and space have drastically changed our view on the nature of bulges and shown that they can also contain dust gas and star forming regions This timely volume presents review articles by a panel of international experts who gathered at a conference at the Space Telescope Science Institute Baltimore to address several fundamental questions What is a bulge When and how did bulges form And on what timescales This volume provides a state of the art picture of our new understanding of these fundamental building blocks of galaxies and a stimulating reference point for all those interested in galaxy formation
