Ozdag, Marcos Ferretti, 2010-02-04 Create low power higher performance circuits with shorter design times using this practical guide to asynchronous design This practical alternative to conventional synchronous design enables performance close to full custom designs with design times that approach commercially available ASIC standard cell flows It includes design trade offs specific design examples and end of chapter exercises Emphasis throughout is placed on practical techniques and real world applications making this ideal for circuit design students interested in alternative design styles and system on chip circuits as well as circuit designers in industry who need new solutions to old problems **Computer Literature Bibliography** United States.
