Symbolic Algebraic Methods And Verification Methods:

Symbolic Algebraic Methods and Verification Methods Götz Alefeld, Jiri Rohn, Siegfried M. Rump, Tetsuro Yamamoto, 2001-02-12 The usual implementation of real numbers as floating point numbers on existing computers has the well known disadvantage that most of the real numbers are not exactly representable in floating point Also the four basic arithmetic operations can usually not be performed exactly During the last years research in different areas has been intensified in order to overcome these problems LEDA Library by K Mehlhorn et al Exact arithmetic with real numbers by A Edalat et al Symbolic algebraic methods verification methods The latest development is the combination of symbolic algebraic methods and verification methods to so called hybrid methods This book contains a collection of worked out talks on these subjects given during a Dagstuhl seminar at the Forschungszentrum für Informatik Schlo Dagstuhl Germany presenting the state of the art

Symbolic-algebraic Methods and Verification Methods Götz Alefeld, Jiri Rohn, Siegfried M. Rump, Tetsuro Yamamoto, 1999

Using Algebraic Geometry David A Cox, John Little, Donal O'Shea, 2005-03-17 The discovery of new algorithms for dealing with polynomial equations and their implementation on fast inexpensive computers has revolutionized algebraic geometry and led to exciting new applications in the field This book details many uses of algebraic geometry and highlights recent applications of Grobner bases and resultants This edition contains two new sections a new chapter updated references and many minor improvements throughout

Numerical Verification Methods and Computer-Assisted Proofs for Partial Differential Equations Mitsuhiro T. Nakao, Michael Plum, Yoshitaka Watanabe, 2019-11-11 In the last decades various mathematical problems have been solved by computer assisted proofs among them the Kepler conjecture the existence of chaos the existence of the Lorenz attractor the famous four color problem and more In many cases computer assisted proofs have the remarkable advantage compared with a theoretical proof of additionally providing accurate quantitative information The authors have been working more than a quarter century to establish methods for the verified computation of solutions for partial differential equations mainly for nonlinear elliptic problems of the form $u = f(x, u)$ with Dirichlet boundary conditions Here by verified computation is meant a computer assisted numerical approach for proving the existence of a solution in a close and explicit neighborhood of an approximate solution The quantitative information provided by these techniques is also significant from the viewpoint of a posteriori error estimates for approximate solutions of the concerned partial differential equations in a mathematically rigorous sense In this monograph the authors give a detailed description of the verified computations and computer assisted proofs for partial differential equations that they developed In Part I the methods mainly studied by the authors Nakao and Watanabe are presented These methods are based on a finite dimensional projection and constructive a priori error estimates for finite element approximations of the Poisson equation In Part II the computer assisted approaches via eigenvalue bounds developed by the author Plum are explained in detail The main task of this method consists of establishing eigenvalue bounds

for the linearization of the corresponding nonlinear problem at the computed approximate solution Some brief remarks on other approaches are also given in Part III Each method in Parts I and II is accompanied by appropriate numerical examples that confirm the actual usefulness of the authors methods Also in some examples practical computer algorithms are supplied so that readers can easily implement the verification programs by themselves

Algorithmic Aspects of Analysis, Prediction, and Control in Science and Engineering Jaime Nava, Vladik Kreinovich, 2014-10-18 This book demonstrates how to describe and analyze a system s behavior and extract the desired prediction and control algorithms from this analysis A typical prediction is based on observing similar situations in the past knowing the outcomes of these past situations and expecting that the future outcome of the current situation will be similar to these past observed outcomes In mathematical terms similarity corresponds to symmetry and similarity of outcomes to invariance This book shows how symmetries can be used in all classes of algorithmic problems of sciences and engineering from analysis to prediction to control Applications cover chemistry geosciences intelligent control neural networks quantum physics and thermal physics Specifically it is shown how the approach based on symmetry and similarity can be used in the analysis of

real life systems in the algorithms of prediction and in the algorithms of control Inclusion Methods for Nonlinear Problems Jürgen Herzberger, 2012-12-06 This workshop was organized with the support of GAMM the International Association of Applied Mathematics and Mechanics on the occasion of J Herzberger's 60th birthday GAMM is thankful to him for all the time and work he spent in the preparation and holding of the meeting The talks presented during the workshop and the papers published in this volume are part of the field of Verification Numerics The important subject is fostered by GAMM already since a number of years especially also by the GAMM Fachausschuß special interest group Rechnerarithmetik und Wissenschaftliches Rechnen GiHz Alefeld Karlsruhe Dezember 2001 President of GAMM Preface At the end of the year 2000 about 23 scientists from many countries gathered in the beautiful city of Munich on the occasion of the International GAMM Workshop on Inclusion Methods for Nonlinear Problems with Applications in Engineering Economics and Physics from December 15 to 18 The purpose of this meeting was to bring together representatives of research groups from Austria Bulgaria China Croatia Germany Japan Russia Ukraine and Yugoslavia who in a wider sense work in the field of calculating numerical solutions with error bounds Most of those participants have already known each other from earlier occasions or closely cooperated in the past Representatives from three Academies of Sciences were among the speakers of this conference from the Bulgarian Academy the Russian Academy and the Ukrainian Academy of Sciences

the elementary floating point operations are extended to the customary product spaces of computations including interval spaces The mathematical properties of these models are extracted into an axiomatic approach which leads to a general theory of computer arithmetic Detailed methods and circuits for the implementation of this advanced computer arithmetic on digital computers are developed in part two of the book Part three then illustrates by a number of sample applications how this extended computer arithmetic can be used to compute highly accurate and mathematically verified results The book can be used as a high level undergraduate textbook but also as reference work for research in computer arithmetic and applied mathematics
