System Modelling and Optimization J. Dolezal, Jiri Fidler, 2013-06-05 Proceedings volume contains carefully selected papers presented during the 17th IFIP Conference on System Modelling and Optimization Optimization theory and practice optimal control system modelling stochastic optimization and technical and non technical applications of the existing theory are among areas mostly addressed in the included papers Main directions are treated in addition to several survey papers based on invited presentations of leading specialists in the respective fields Publication provides state of the art in the area of system theory and optimization and points out several new areas e g fuzzy set neural nets where classical optimization topics intersects with computer science methodology

Symbolic and Quantitative Approaches to Reasoning and Uncertainty Michael Clarke, Rudolf Kruse, Serafin Moral, 1993-10-20 In recent years it has become apparent that an important part of the theory of artificial intelligence is concerned with reasoning on the basis of uncertain incomplete or inconsistent information A variety of formalisms have been developed including nonmonotonic logic fuzzy sets possibility theory belief functions and dynamic models of reasoning such as belief revision and Bayesian networks Several European research projects have been formed in the area and the first European conference was held in 1991 This volume contains the papers accepted for presentation at ECSQARU 93 the European Conference on Symbolic and Quantitative Approaches to Reasoning and Uncertainty held at the University of Granada Spain November 8 10 1993

The Geometry of Uncertainty Fabio Cuzzolin, 2020-12-17 The principal aim of this book is to introduce to the widest possible audience an original view of belief calculus and uncertainty theory In this geometric approach to uncertainty uncertainty measures can be seen as points of a suitably complex geometric space and manipulated in that space for example combined or conditioned In the chapters in Part I Theories of Uncertainty the author offers an extensive recapitulation of the state of the art in the mathematics of uncertainty This part of the book contains the most comprehensive summary to date of the whole of belief theory with Chap 4 outlining for the first time and in a logical order all the steps of the reasoning chain associated with modelling uncertainty using belief functions in an attempt to provide a self contained manual for the working scientist In addition the book proposes in Chap 5 what is possibly the most detailed compendium available of all theories of uncertainty Part II The Geometry of Uncertainty is the core of this book as it introduces the author's own geometric approach to uncertainty theory starting with the geometry of belief functions Chap 7 studies the geometry of the space of belief functions or belief space both in terms of a simplex and in terms of its recursive bundle structure Chap 8 extends the analysis to Dempster's rule of combination introducing the notion of a conditional subspace and outlining a simple geometric construction for Dempster's sum Chap 9 delves into the combinatorial properties of plausibility and commonality functions as equivalent representations of the evidence carried by a belief function then Chap 10 starts extending the applicability of the geometric approach to other uncertainty measures focusing in particular on

possibility measures consonant belief functions and the related notion of a consistent belief function The chapters in Part III Geometric Interplays are concerned with the interplay of uncertainty measures of different kinds and the geometry of their relationship with a particular focus on the approximation problem Part IV Geometric Reasoning examines the application of the geometric approach to the various elements of the reasoning chain illustrated in Chap 4 in particular conditioning and decision making Part V concludes the book by outlining a future complete statistical theory of random sets future extensions of the geometric approach and identifying high impact applications to climate change machine learning and artificial intelligence The book is suitable for researchers in artificial intelligence statistics and applied science engaged with theories of uncertainty The book is supported with the most comprehensive bibliography on belief and uncertainty theory

Computational Intelligence in Theory and Practice Bernd Reusch,Karl-Heinz Temme,2013-03-20 Computational Intelligence with its roots in Fuzzy Logic Neural Networks and Evolutionary Algorithms has become an important research and application field in computer science in the last decade Methodologies from these areas and combinations of them enable users from engineering business medicine and many more branches to capture and process vague incomplete uncertain and imprecise data and knowledge Many algorithms and tools have been developed to solve problems in the realms of high and low level control information processing diagnostics decision support classification optimisation and many more This book tries to show the impact and feedback between theory and applications of Computational Intelligence highlighted on selected examples

New Foundations for Automation of Default Reasoning Thomas Linke,2000 Intelligent Systems and Soft Computing Behnam Azvine,Nader Azarmi,Detlef D. Nauck,2006-12-30 Artificial intelligence has traditionally focused on solving human centered problems like natural language processing or common sense reasoning On the other hand for a while now soft computing has been applied successfully in areas like pattern recognition clustering or automatic control The papers in this book explore the possibility of bringing these two areas together This book is unique in the way it concentrates on building intelligent software systems by combining methods from diverse disciplines such as fuzzy set theory neuroscience agent technology knowledge discovery and symbolic artificial intelligence The first part of the book focuses on foundational aspects and future directions the second part provides the reader with an overview of recently developed software tools for building flexible intelligent systems the final section studies developed applications in various fields

New Approaches in Classification and Data Analysis Edwin Diday,Yves Lechevallier,Martin Schader,Patrice Bertrand,Bernard Burtshy,2013-03-14 The subject of this book is the analysis and processing of structural or quantitative data with emphasis on classification methods new algorithms as well as applications in various fields related to data analysis and classification The book presents the state of the art in world wide research and application of methods from the fields indicated above and consists of survey papers as well as research papers
