Beyond First Order Model Theory, Volume II Jose Iovino,2023-07-03 Model theory is the meta mathematical study of the concept of mathematical truth After Afred Tarski coined the term Theory of Models in the early 1950 s it rapidly became one of the central most active branches of mathematical logic In the last few decades ideas that originated within model theory have provided powerful tools to solve problems in a variety of areas of classical mathematics including algebra combinatorics geometry number theory and Banach space theory and operator theory The two volumes of Beyond First Order Model Theory present the reader with a fairly comprehensive vista rich in width and depth of some of the most active areas of contemporary research in model theory beyond the realm of the classical first order viewpoint Each chapter is intended to serve both as an introduction to a current direction in model theory and as a presentation of results that are not available elsewhere All the articles are written so that they can be studied independently of one another This second volume contains introductions to real valued logic and applications abstract elementary classes and applications interconnections between model theory and function spaces nonstructure theory and model theory of second order logic Features A coherent introduction to current trends in model theory Contains articles by some of the most influential logicians of the last hundred years No other publication brings these distinguished authors together Suitable as a reference for advanced undergraduate postgraduates and researchers Material presented in the book e g abstract elementary classes first order logics with dependent sorts and applications of infinitary logics in set theory is not easily accessible in the current literature The various chapters in the book can be studied independently

Motivic Integration and its Interactions with Model Theory and Non-Archimedean Geometry: Volume 1 Raf Cluckers,Johannes Nicaise,Julien Sebag,2011-09-22 The development of Maxim Kontsevich s initial ideas on motivic integration has unexpectedly influenced many other areas of mathematics ranging from the Langlands program over harmonic analysis to non Archimedean analysis singularity theory and birational geometry This book assembles the different theories of motivic integration and their applications for the first time allowing readers to compare different approaches and assess their individual strengths All of the necessary background is provided to make the book accessible to graduate students and researchers from algebraic geometry model theory and number theory Applications in several areas are included so that readers can see motivic integration at work in other domains In a rapidly evolving area of research this book will prove invaluable This first volume contains introductory texts on the model theory of

Matrix Functions of Bounded Type: An Interplay Between Function Theory and Operator Theory Raúl E. Curto, In Sung Hwang, Woo Young Lee, 2019-09-05 In this paper the authors study matrix functions of bounded type from the viewpoint of describing an interplay between function theory and operator theory They first establish a criterion on the coprimeness of two singular inner functions and obtain several properties of the Douglas Shapiro Shields factorizations of matrix functions of bounded type They propose a new notion of tensored scalar singularity and then answer questions on Hankel operators with matrix valued bounded type symbols They also examine an interpolation problem related to a certain functional equation on matrix functions of bounded type this can be seen as an extension of the classical Hermite Fejér Interpolation Problem for matrix rational functions The authors then extend the H^∞ functional calculus to an H^2/H^∞ functional calculus for the compressions of the shift Next the authors consider the subnormality of Toeplitz operators with matrix valued bounded type symbols and in particular the matrix valued version of Halmos's Problem 5 and then establish a matrix valued version of Abrahamse's Theorem They also solve a subnormal Toeplitz completion problem of 2×2 partial block Toeplitz matrices Further they establish a characterization of hyponormal Toeplitz pairs with matrix valued bounded type symbols and then derive rank formulae for the self commutators of hyponormal Toeplitz pairs
