The Nature Of Ball Lightning:

The Nature of Ball Lightning Stanley Singer, 2012-12-06 In 1837 a comprehensive discussion of lightning appeared in the Annual of the French Bureau des Longitudes with a section on ball lightning which provided for the first time a readily available source in the scientific literature of the basic properties of this curious natural phenomenon The author Francois Arago was the dominant influence in the French Academy of Sciences in the nineteenth century having become a member of that august body at the age of twenty three His attention alone doubtless served at that time to establish the validity of scientific interest in the problem In addition his discussion covered some of the major questions associated with ball lightning in a notably clear sighted effective style Later reconsideration of the same questions often provided no significant improvement over Arago's discussion There followed a dauntless band of varying but always small number who attempted to account for an apparently simple natural occurrence a ball of fire usually seen in thunderstorms with the best knowledge that advancing science could provide All attempts to deal with this phenomenon were in variably frustrated The characteristics of ball lightning could be readily cataloged but they firmly resisted both experimental reproduction and theoretical explanation One may say that to this day there is no explanation accepted by a large number of scientists Several investigators of great ability and considerable accomplishment in different fields of science including Faraday Kelvin and Arrhenius took note of the problem

The Mystery of Ball Lightning Revealed Vladimir Torchigin, 2024-10-28 In this book the consequences of a perfectly new natural phenomenon associated with the existence of self confined circulating light which is responsible for the paradoxical behavior and anomalies of ball lightning are considered It is shown that similar phenomena can exist in the microworld which makes it possible to explain the finite lifetime of microworld objects their wave properties mutual attraction and the possibility of energy exchange between nuclei without overcoming the Coulomb barrier The latter possibility allows the extraction of nuclear energy using circulating light Several options for nuclear power plants are given where nuclear fuel is ordinary water The book is based on over 80 scientific articles published in leading international scientific journals in physics and optics
