The New Information Industry Regulatory Challenges And The First Amendment:

The New Information Industry Richard Klingler, 2010-12-01 Rapid developments in technology are reshaping how citizens receive and use information electronically At the same time government regulation limits the services that may be offered by the industries that transmit information and will determine how interactive and other advanced video services are able to develop In this book Richard Klingler traces the evolution of regulatory regimes that constrain the broadcasting telephone and cable television industries as well as emerging information services He also examines new information delivery systems and the integration of electronic carriage with provision of content and information services including services that resemble printed products Klingler describes two basic challenges to current regulation of these industries First established regulatory regimes often harm competition and the development of services in industries that are increasingly interrelated and rapidly changing He outlines how recent developments contradict basic assumptions underlying the structure of current regulation and how regulation might better respond to those developments Second the Constitution limits regulation of these industries as they increasingly engage in activities protected by the First Amendment Klingler shows how the First Amendment as recently elaborated applies to electronic transmission of information and likely precludes certain forms of regulation including established regulation of the content of communications The book also examines how regulation designed to limit market power in these industries can be reconciled with the First Amendment *Encyclopedia of Library and Information Science* Allen Kent, 2002-06-04 This supplement covers topics ranging from academic library funding to visual information querying **The New Information Industry** Richard Klingler, 1996 In this book Richard Klingler traces the evolution of regulatory regimes that constrain the broadcasting telephone and cable television industries as well as emerging information services He also examines new information delivery systems and the integration of electronic carriage with provision of content and information services including services that resemble printed products Media Regulation, Public Interest and the Law Mike Feintuck, 2006-07-10 Regulation of the media has traditionally been premised upon claims of the public interest yet the term itself remains contested and generally ill defined In the context of technological development and convergence as well as corporate conglomeration traditional public service values in British broadcasting are challenged by market values With such ongoing trends continuing apace regulators must increasingly justify their interventions The communication industries commercialisation and privatisation pose a fundamental threat to democratic values Media Regulation Public Interest and the Law argues that regulators will only successfully protect such values if claims associated with citizenship are recognised as the rationale and objective for the regulatory endeavour While such themes are central to the book this second edition has been substantially revised and updated to take account of matters such as European Directives the UK's Communications Act 2003 the process of reviewing the BBC's Charter and relevant aspects of the reform of general competition law Key Features Identifies and examines the rationales underlying media regulation and the current challenges

to them Considers fully the actual and potential utility of legal mechanisms and principles in the design and activities of regulatory institutions Fully updated to take account of the European Union's 2002 New Regulatory Framework and the UK's Communications Act 2003 Accessible to a wide readership in media studies journalism broadcasting and law Praise for the First Edition A detailed and critical assessment of the problems and confusions of recent media regulation in the UK including digital television franchising and the Broadcasting Complaints Commission it is well organised and should be a useful resource for more advanced students and academics for updating the public regulation case with vigour and clarity this book is to be welcomed THES Communications: The Information Society , **Encyclopedia of Library and Information**

Deregulation, and Modernization in Latin America Moisés Naím, Joseph S. JACKET *The V-chip Debate* Monroe E. Price, 2013-11-26 The V chip is a highly significant part of the discussion about whether television or broadcasting in general deserves some special attention in terms of its accessibility to children its particular power to affect conduct and its invasiveness But as this notion of filtering and labeling has caught the imagination of the regulator the legislator and all those who wish to consider new ways to alter bargaining over imagery in society the very idea of the V chip or its equivalent is moving across other technologies including the Internet The V chip issue has also fueled the ongoing debate about violence and sexual practices in society and how representations on television relate to those practices Although the initial concept of the V chip is simple its flow into the public realm raises so many extraordinary questions that the introduction and production of the chip virtually serves as a case study in problems of law and public policy The very conceptualization of speech in society is being affected by this issue Accordingly the place of the V chip in this debate is increasingly important indeed it may be argued that the V chip's contribution to legal argumentation may be greater than its ultimate contribution to the relationship between children and imagery Among the questions the contributors address are What research basis is necessary to require a framework for labeling and rating What relationship between government and the image producing industries can be characterized for constitutional and other reasons as voluntary as opposed to coercive Who should evaluate these images To what extent should the evaluation process be centralized and or

distributed What assessment is appropriate to evaluate whether the experiment is successful In addition to the V chip s origin s in Canada and its further evolution in the United States this book discusses the development of the V chip and television rating systems in Europe Australia and throughout the world It also includes essays which contrast the very different approaches in Canada and the United States in terms of the role of regulatory agency industry and government

Freedom of Expression Vincenzo Zeno-Zencovich,2008-06-30 This book takes a multidisciplinary approach to the issues surrounding freedom of expression looking at the current legal position in a number of European countries as well as engaging with the wider debates on the topic amongst sociologists political scientists and economists In the book Vincenzo Zeno Zencovich addresses recent developments which have had a bearing on the debate including the changes in communication brought about by the internet and the growing role of the European Union and the Council of Europe

Internationalisation and Economic Institutions Mark Thatcher,2007-07-19 This book examines when how and why internationalisation affects national economic institutions It confronts questions at the heart of debates in political economy and comparative politics What does internationalisation of markets mean Who are its carriers in domestic arenas Through which mechanisms does it affect decisions about national institutional reform What are institutional outcomes in the face of internationalisation The book responds to its questions by looking at key economic institutions in five strategic sectors securities trading telecommunications electricity airlines and postal services It compares across four countries that represent different varieties of capitalism namely Britain France Germany and Italy over the period between 1965 and 2005 Thus it combines cross national historical and cross sectoral comparisons The author distinguishes technological and economic forms of internationalisation from policy forms notably decisions in powerful overseas nations and supranational regulation He argues that contrary to expectations the first was met with institutional inertia In contrast policy forms of internationalisation namely reforms in the US and European Union regulation played significant roles in undermining long standing national institutions The book explores the mechanisms whereby policy forms of internationalisation were influential by looking at the strategies coalitions and resources of key actors in national arenas It also shows that institutional outcomes were surprising all four countries albeit through different routes adopted increasingly similar reforms of economic institutions privatisation the ending of monopolies and delegation to independent regulatory agencies The book rejects the view that technological and economic forms of internationalisation drive institutional change It suggests that policy forms of internationalisation are more important because they become part of domestic decision making and aid the reform of well established national institutions
