If you like this book, write a review. *Symphony in C* Robert M. Hazen, 2019-06-11. A Science News Favorite Book of 2019. An earth scientist reveals the dynamic biography of the most resonant and most necessary chemical element on Earth: Carbon. It's in the fibers in your hair, the timbers in your walls, the food that you eat, and the air that you breathe. It's worth billions of dollars as a luxury and half a trillion as a necessity, but there are still mysteries about the element that can be both diamond and coal. Where does it come from? What does it do, and why, above all, does life need it? With poetic storytelling, Robert M. Hazen leads us on a global journey through the origin and evolution of life's most essential and ubiquitous element.

Antarctica Mysteries Sierra Layne, 2025-03-20. Antarctica Mysteries unveils the hidden secrets of Earth's southernmost continent, exploring its unique geological history and extreme environments. Once part of the supercontinent Gondwana, Antarctica's isolation has preserved geological records and potentially fostered unique life forms. The book investigates perplexing magnetic anomalies, possibly caused by hidden geological structures, and explores the existence of deep ice caves, hypothesizing about the potential for stable liquid water environments within them. The book delves into ongoing scientific efforts to discover microbial life in subglacial lakes, examining adaptations that allow life to persist in these extreme conditions. It connects Antarctic research to broader fields like astrobiology, using the continent as an analogue for icy moons. Presenting information in a fact-based analytical style, Antarctica Mysteries progresses from geographical introductions to detailed examinations of magnetic anomalies, ice caves, and subglacial life.

The Science Book National Geographic, 2011-08. Natural phenomena, revolutionary inventions, scientific facts, and the most up-to-date questions are all explained in detailed text that is complemented by visually arresting graphics. Six major sections are further broken down into subsections that encompass everything from microscopic life to nuclear power.
