Teaching Learners Who Struggle with Mathematics Helene J. Sherman,Lloyd I. Richardson,George J. Yard,2019-03-07 Highly regarded by instructors in past editions for its sequencing of topics and extensive set of exercises the latest edition of Abstract Algebra retains its concrete approach with its gentle introduction to basic background material and its gradual increase in the level of sophistication as the student progresses through the book Abstract concepts are introduced only after a careful study of important examples Beachy and Blair s clear narrative presentation responds to the needs of inexperienced students who stumble over proof writing who understand definitions and theorems but cannot do the problems and who want more examples that tie into their previous experience The authors introduce chapters by indicating why the material is important and at the same time relating the new material to things from the student s background and linking the subject matter of the chapter to the broader picture Building proficiency in learning mathematics by tailoring instruction to students specific misconceptions and learning needs is the backbone of this indispensable text written for K 8 pre and inservice teachers as well tutors An important theme is that long term retention is based on a strong conceptual foundation of numeracy and on a well designed learning environment Each chapter deals with a different mathematics topic including whole numbers fractions decimals as well as time and money Chapters also include examples of error patterns and specific well defined strategies and activities for diagnosis prescription and remediation New to this edition is a chapter devoted to English

language learners The complexities of language barriers are delineated along with reasons that students struggle with learning English and mathematics at the same time An audio file of common mathematics terms translated from English into most often spoken languages by ELLs can be accessed at www.youareamathperson.com Outstanding features Response to Intervention RTI model underpins discussions of differentiating instruction Mathematics content reflects components of the Common Core State Standards Initiative for Mathematics and the National Council of Teachers of Mathematics Principles and Standards for School Mathematics Case studies and student examples promote a sound understanding of learners varied cognitive behavioral and physical needs Discussion questions challenge readers to think more deeply about the application and utility of concepts related to the error patterns Step by step directions for interactive instructional classroom games and activities are provided to extend and enrich teaching and learning

Prentice Hall Skills Intervention Kit, 2001 *Studies of Diagnosis and Remediation with High School Algebra Students* R. Martinak, Anthony E. Kelly, University of Aberdeen. Department of Computing Science, D. Sleeman, J. Moore, R. Ward, STANFORD UNIV PALO ALTO CALIF., 1987 This research note compares the effects of reteaching and different styles of error based remediation More research is needed to understand the factors which lead to successful remediation Six studies discussed in this RN compare error specific or model based remediation MBR with reteaching in algebra The results show that MBR and reteaching are both more effective than no tutoring but MBR is not clearly more effective than reteaching The results are discussed both in terms of stability of errors and of their relevance to educational practice and the field of intelligent tutoring systems Classical computer aided intelligence systems have been used to provide tutorial instruction and socratic or supportive problem solving Tutorial systems aim to diagnose a student's errors and then to provide appropriate remediation Supportive problem solving systems monitor the student's problem solving and aim to provide help and advice whenever requested The subfield of Intelligent CAI or ITS Intelligent Tutoring Systems arose because workers felt that CAI was intrinsically limited and in fact incapable of providing highly adaptive instruction

A Study of Diagnostic and Remedial Techniques Used by Master Algebra Teachers Anthony E. Kelly, D. Sleeman, STANFORD UNIV PALO ALTO CALIF., 1988 This research note raises the issues of what makes for effective diagnosis and remediation of linear algebra equations and how this affects the development of intelligent tutoring systems The note reports three studies In the first four experienced teachers were given a series of incorrectly worked algebra tasks and asked to provide diagnosis and remediation n b the students were not present The second study was a series of interviews with three Irish math teachers discussing their approaches to algebra diagnosis and remediation The third study observed a teacher remediating eight students on the basis of diagnoses provided by the PIXIE ITS program This teacher probed for causes beneath the surface errors made by the student The major conclusions of the three studies were that teachers generally taught algebra procedurally rather than conceptually and that teachers thought it important to determine the causes behind errors Keywords Intelligent tutoring system Artificial intelligence Expert systems

PIXIE jhd **MATH Online Intervention** Prentice Hall (School Division), **Using a Self-managed Intervention to Build Computational and Procedural Fluency with Complex Computation** James Stocker, 2016 Behavioral fluency synthesizes accuracy and speed and enables students to operate successfully in the learning environment The current investigation tested a self managed frequency building intervention designed to increase behavioral fluency in four seventh grade students with three critical pre algebra skills order of operations adding and subtracting fractions with uncommon denominators and long division with and without a remainder Elements of the frequency building intervention comprised of cue cards timed practice and feedback The experimenter applied an alternating treatments design with the first experimental condition consisting of three one minute frequency building trials with 30 seconds of feedback provided immediately after each one minute trial The second condition consisted of one three minute frequency building trial immediately followed by 90 seconds of feedback A baseline condition had the students participate in one minute timed trial with no feedback Findings indicate that all four students successfully self managed and benefited from frequency building especially with long division and adding and subtracting fractions
