

OBSERVABLE BEHAVIORS

Observable behaviors are actions that can be seen with the naked eye. They are sometimes referred to as overt behaviors.

DEFINITION

Proponents of behaviorism believed that in order for psychology to be a respected science, it should only concern itself with what can be seen and measured, as this was seen as all that could be genuinely studied. They rejected references to inner thoughts (i.e., cognitive processes) because it was not possible to measure those constructs.

EXAMPLES

- **The Skinner Box:** When a rat presses a bar to access food it can be clearly seen, demonstrating an observable behavior in the rat.
- **Salivation in Response to Food:** When presented with food, an animal's digestive system will secrete salivatory juices which can be measured.
