Lockshin,2007-11-05 Scientists have great passion What could be more exhilarating than to go to work every day feeling as if you were once again a nine year old called up to the stage to help the magician with his trick To be a researcher is to always be in the position of having the chance to see how the trick works No wonder that many researchers feel that each new day is the most exciting day to be a scientist It therefore is not surprising that scientists have such trouble communicating with non scientists It is difficult for the scientist to understand a life not focused on the desire to understand But the differences are not that Everyone wants to understand that is one of the factors that make us human The difference is more that scientists limit their definition of comprehension to specific rules of logic and evidence These rules apply and are used in everyday life but often with less rigor or restrictions on evidence Whale-watching Impacts: Science, Human Dimensions and Management Aldo S. Beaked Whales Richard Ellis,James G. Mead,2017-05-08 The only book dedicated to the mysterious beaked whale this beautiful volume combines full color illustrations with fascinating facts Beaked whales have been shrouded in mystery for most of the twentieth century Denizens of deep remote ocean waters and highly resistant to life in captivity they have proven notoriously difficult for humans to observe Over the past few decades however scientists have gained a better understanding of this distinct group of cetaceans deciphering the natural history of the twenty two beaked whale species Here famed artist and naturalist Richard Ellis and leading beaked whale researcher James G Mead bring these elusive marine mammals into the limelight Beaked whales generous life spans can extend well past 70 years They spend their decades diving to extreme depths in search of prey which they capture by expanding their oral cavity suddenly to suck in the squid or fish they are hunting It appears that these sleek predators may engage in fierce clandestine aquatic battles as the bodies of many males are covered in scars Because many species are only somewhat larger than dolphins they are often confused with porpoises however some larger beaked whale species may grow to 40 feet These enigmatic and compelling creatures need our help their numbers are declining perhaps due to the damaging effects of naval sonar on their sophisticated auditory systems In Ellis and Mead s book the beaked whales finally get their due The duo provides a
