**Random Walks, Brownian Motion, and Interacting Particle Systems** H. Kesten, R. Durrett, 2012-12-06 This collection of articles is dedicated to Frank Spitzer on the occasion of his 65th birthday The articles written by a group of his friends colleagues former students and coauthors are intended to demonstrate the major influence Frank has had on probability theory for the last 30 years and most likely will have for many years to come Frank has always liked new phenomena clean formulations and elegant proofs He has created or opened up several research areas and it is not surprising that many people are still working out the consequences of his inventions By way of introduction we have reprinted some of Frank's seminal articles so that the reader can easily see for himself the point of origin for much of the research presented here These articles of Frank's deal with properties of Brownian motion fluctuation theory and potential theory for random walks and of course interacting particle systems The last area was started by Frank as part of the general resurgence of treating problems of statistical mechanics with rigorous probabilistic tools

**Highly Structured Stochastic Systems** Peter J. Green, Nils Lid Hjort, Sylvia Richardson, 2003 Highly Structured Stochastic Systems HSSS is a modern strategy for building statistical models for challenging real world problems for computing with them and for interpreting the resulting inferences Complexity is handled by working up from simple local assumptions in a coherent way and that is the key to modelling computation inference and interpretation the unifying framework is that of Bayesian hierarchical models The aim of this book is to make recent developments in HSSS accessible to a general statistical audience Graphical modelling and Markov chain Monte Carlo MCMC methodology are central to the field and in this text they are covered in depth The chapters on graphical modelling focus on causality and its interplay with time the role of latent variables and on some innovative applications Those on Monte Carlo algorithms include discussion of the impact of recent theoretical work on the evaluation of performance in MCMC extensions to variable dimension problems and methods for dynamic problems based on particle filters Coverage of these underlying methodologies is balanced by substantive areas of application in the areas of spatial statistics with epidemiological ecological and image analysis applications and biology including infectious diseases gene mapping and evolutionary genetics The book concludes with two topics model criticism and Bayesian nonparametrics that seek to challenge the parametric assumptions that otherwise underlie most HSSS models Altogether there are 15 topics in the book and for each there is a substantial article by a leading author in the field and two invited commentaries that complement extend or discuss the main article and should be read in parallel All authors are distinguished researchers in the field and were active participants in an international research programme on HSSS This is the 27th volume in the Oxford Statistical Science Series which includes texts and monographs covering many topics of current research interest in pure and applied statistics These texts focus on topics that have been at the forefront of research interest for several years Other books in the series include J Durbin and S J Koopman Time series analysis by State Space Models Peter J Diggle Patrick
