

# SPHERES OF THE EARTH

## ATMOSPHERE

The atmosphere is the envelope of gases surrounding Earth that extends up to approximately 100,000 km above Earth's surface. The extreme edges of the atmosphere lie about 35,000 km above the surface. Atmospheric density decreases going further away from Earth's surface. Because of this, most 99% of the atmosphere's mass lies within 30 km of Earth's surface.

## BIOSPHERE

The biosphere includes both oceanic and terrestrial landforms. On land there are a number of different, nearly recognizable communities called biomes. Biomes essentially result from the interaction of regional climates, biotic and abiotic factors, and underlying surfaces, and are usually defined by their climate, vegetation, and animal life.

## CRYOSPHERE

Derived from the Greek word *kratos*, meaning "cold", the cryosphere encompasses those parts of the Earth system that are subject to temperatures below 0°C for at least part of the year. Its largest components, by far, are the ice sheets in Greenland and Antarctica, but the cryosphere also includes the Arctic Ocean's sea ice, the glaciers, snow, rivers and lakes ice, frozen ground,

## GEOSPHERE

The geosphere is the outer, rigid shell of the solid Earth. It is composed of the entire crust, upper mantle, and lithosphere, and the top rigid portion of the mantle lying above the partially molten, less rigid asthenosphere. Seismic wave propagation, plate movement, and the geosphere is composed of rocks, formed by discontinuous surface layers of sediment and soil.

## HYDROSPHERE

The hydrosphere consists of all the water girding Earth, whether in gas, liquid, or solid. About 97% of the water in the oceans. The remainder is found in the ice sheets of Greenland and Antarctica (2%), and in freshwater lakes, rivers, ground water below the surface, and water vapor in the atmosphere (2%).

**Scientific Controversies** H. Tristram Engelhardt, Jr., Arthur L. Caplan, 1987-04-24 This collection of essays examines the ways in which disputes and controversies about the application of scientific knowledge are resolved Four concrete examples of public controversy are considered in detail the efficacy of Laetrile the classification of homosexuality as a disease the setting of safety standards in the workplace and the utility of nuclear energy as a source of power The essays in this volume show that debates about these cases are not confined to matters of empirical fact Rather as is seen with most scientific and technical controversies they focus on and are structured by complex ethical economic and political interests Drs Engelhardt and Caplan have brought together a distinguished group of scholars from the sciences and humanities who sketch a theory of scientific controversy and attempt to provide recommendations about the ways in which both scientists and the public ought to seek more informed resolutions of highly contentious issues in science and technology *Scientific Controversies* is offered

as a contribution to the better understanding of the roles of both science and nonscientific interests in disputes and controversies pertaining to science and technology      *LBL Newsmagazine* ,1980      **LBL Research Review** ,1981
