

events and negative health outcomes) which may be brought about by the presence, absence, or intensity of such intervening variables as social networks, expectancy related to aging, availability of material resources, coping abilities, and many other intervening variables. Moreover, statistical confounding is often a problem. Because of the plethora of models and of the ways of operationalizing them, complex statistical issues are discussed at length.

As Richard Day concludes, in the final chapter of this book, there are really no treatment modalities to test yet. And given the complex relationships which obtain between stressful life events and negative health outcomes, there are even few recommendations which can be made to state and federal governments at this early stage in the investigative process. This is especially true for the relationships with psychopathologies (which themselves often lack proven diagnostic reliability and validity). But while it will always be impossible to prescribe that patients refrain from stressful life events, it may, with a better understanding of their effects, be possible to create social, biological, and environmental supports in the future to minimize the effects of inescapable life stress.

Thus, while I do not feel that this is a suitable book for the neophyte reader in the subject, or that it succeeds in making recommendations other than the ubiquitous exhortation that further research be done, I feel that it succeeds in marshalling the existing evidence, in explaining the methodologies and the problems inherent in assuring their reliable and valid measurement, in pointing out directions for future research, and in providing a forum for a discussion by some of the foremost investigators in the field.

SYMPTOMS, ILLNESS BEHAVIOR, AND HELP-SEEKING. Edited by David Mechanic. New York, Neale Watson Academic Publications, Inc., 1982. 157 pp. \$11.50. Paperbound.

How do people come to define themselves as ill? When do they decide that they need help, and then to whom do they turn? These questions are addressed from several disciplinary perspectives in this volume, the third in the series entitled "Monographs in Psychosocial Epidemiology." The questions are epidemiological because diseases are differentially distributed in populations, and these distributions are quantifiable. But they are also psychological and sociological because physical and mental illnesses can be perceived very differently by individuals in different social and cultural groups. And the answers to these questions have implications for the provision, use, and cost of health services. The six articles in this monograph, whose quality is almost uniformly high, are all previously unpublished and report on recently undertaken research.

Mechanic's own contribution reports on the follow-up of a study of mothers' and children's illness behavior that he had done in the early 1960s. Those children are now young adults who display some associations between introspectiveness and awareness of psychological symptoms that Mechanic is able to trace to patterns established in early childhood. Wheaton's chapter is an elaborate defense of a psychological distress rating scale, the Langner Index, which has received considerable criticism. He argues that, while there are some problems with the questions about physical symptoms, the more psychological questions are reliable, valid, and
