The Nerve Growth Cone:

The Nerve Growth Cone Paul C. Letourneau, Stanley B. Kater, Eduardo R. Macagno, 1991 Describes research on nerve growth cones the dynamic cell structure that plays a key role in establishing the specific neuronal interconnections that determine neural circuitry and thus behaviour from their individual molecular components to their behaviour within intact living animals

The Self-Organizing Brain: From Growth Cones to Functional Networks M.A. Corner, F.H. Lopes da Silva, H.B.M. Uylings, J. van Pelt, 1994-10-11 This book concentrates on the organizational level of neurons and neuronal networks under the unifying theme The Self Organizing Brain From Growth Cones to Functional Networks Such a theme is attractive because it incorporates all phases in the emergence of complexity and adaptive organization as well as involving processes that remain operative in the mature state The order of the sections follows successive levels of organization from neuronal growth cones neurite formation neuronal morphology and signal processing to network development network dynamics and finally to the formation of functional circuits

The Axon Stephen G. Waxman, Jeffery D. Kocsis, Peter K. Stys, 1995 The axon interposed between the cell body and the synaptic terminals in most neurons plays a crucial role in connecting neurons and acting as a conduit for the transmission of information between them This book provides a comprehensive and up to date compendium that brings together chapters on the structure function and pathophysiology of axons in both the PNS and CNS Carefully written well illustrated with superb illustrations and generously referenced the 33 chapters and introduction have been authored by 49 world renowned authorities Recent advances in the molecular neurobiology of axons are carefully reviewed and new areas such as the molecular biology of ion channels and myelination the role of calcium in pathophysiology and regeneration cell adhesion molecules and their roles in axo glial interactions and axonal guidance and optical recording methods are highlighted This book will provide an essential reference for neuroscientists as well as clinicians such as neurologists neurosurgeons and clinical electrophysiologists interested in axons

The Saga of the Nerve Growth Factor Rita Levi-Montalcini, 1997 This volume is a collection of articles written by Nobel Laureate Rita Levi Montalcini and published from 1942 to 1995 Studies described in the first part set the stage for the discovery of a protein molecule which became known as the Nerve Growth Factor NGF described in detail in the second part The NGF synthesized in minute amounts in all vertebrate tissues plays an essential role in the differentiation and survival of several nerve cell populations in the peripheral and central nervous system The discovery of the NGF was defined by the Nobel Foundation as a milestone in developmental neurobiology and the author was awarded in 1986 with this prestigious award Studies pursued in subsequent years and still in progress have unveiled other fundamental properties of the NGF described in the third part of this volume

TRP Ion Channel Function in Sensory Transduction and Cellular Signaling Cascades MD, PH.D., Wolfgang B. Liedtke, 2006-09-29 Since the first TRP ion channel was discovered in

Drosophila melanogaster in 1989 the progress made in this area of signaling research has yielded findings that offer the potential to dramatically impact human health and wellness Involved in gateway activity for all five of our senses TRP channels have been shown to respond to a wide range of stimuli

Neurobiology of Actin Gianluca Gallo,Lorene M Lanier,2010-11-04 This text is an introduction to the interface between the actin cytoskeleton and the myriad of issues fundamental to the understanding of the nervous system It covers the neurobiology of actin ranging from basic cellular organization and function to the roles of actin in the health and disease states of the nervous system Its opening chapter presents the fundamental concepts required to appreciate the details of the molecular machinery that regulates actin in a cellular context setting the stage for the first part of the book which reviews the neurobiology of actin at the cellular level The latter section of the book then discusses the functions of actin in the context of neurobiological issues ranging from early development to synaptic function and disease states of the nervous system This text is intended for neuroscientists interested in investigating the actin cytoskeleton in the context of their particular neuroscience research program and its chapters are cross referenced in order to assist readers in finding relevant information that is covered in greater depth in other chapters

Neuronal Recognition Samuel Barondes,2013-11-11 An outstanding characteristic of the nervous system is that neurons make selective functional contacts Each neuron behaves as if it recognizes the neurons with which it associates and rejects associations with others The specific interneuronal relationships that result define the innate neuronal circuits that determine the functioning of this system The purpose of this volume is to present some approaches to the problem of neuronal recognition The volume has been somewhat arbitrarily divided into three sections In the first section the overriding theme is the degree of specificity of neuronal recognition How specific is specific Is the specificity so precise that the neurites of one neuron will only make synaptic contact with a unique target neuron If less precise within what range Are the rules for specification that are operative in the embryo still operative at the same level of precision when connections regenerate in the mature organism Are they still operative in dissociated tissue grown in culture The second section of this volume contains reviews of morphological studies of synaptogenesis and biochemical studies of synaptic components Can the morphology of developing cellular contacts provide clues about selectivity Can the chemical components of synaptic junctions be isolated and characterized Do they include resolvable components that mediate neuronal recognition The third section contains studies seeking to identify the existence of specific molecules that might mediate cellular recognition A major question here is whether molecules of this type even exist

Developmental Neuropsychobiology William T Greenough,Janice M. Juraska,2013-10-22 Developmental Neuropsychobiology is a compendium of papers that deals with developmental neuroscience and developmental psychology as well as the broad range of approaches toward brain behavior development One paper reviews the embryonic mechanisms including the pattern formation that develops in a single fertilized egg particularly focusing on limb innervation as a special case of pattern formation Another paper discusses the

regulation of nerve fiber elongation during embryogenesis One author analyzes the pathways and changing connections in the nervous system of the insect he shows that manipulating neural organization by grafting results in the ability of the transplanted sensory cells to find the proper central connections Another paper reviews the sex differences in developmental plasticity of behavior and the brain These differences point to the vulnerability of males during development to incidences of autism dyslexia or cerebral palsy compared to females One paper also examines alternative perceptions of parent offspring relationships This collection can prove helpful for researchers students and academicians involved in the disciplines of biological or psychological sciences
