

What is a slipped disc?

Slipped disc is also called as disc prolapse / disc herniation. The bulging disc may press on the nerve roots coming from the spinal cord. Apart from the compression there is also some inflammation around the prolapsed part of the disc.

This inflammation may irritate the nerve root and also causes swelling, which increases pressure on the nerve.

nerves which can cause pain that can be very bad Most herniated discs happen in the lower back and they are induced by wear and tear that comes with age But any disc in your spine can pop out of place Some individuals are born with spinal canals that are narrower than normal or with other problems that make them more likely to have a herniated disc Most herniated discs happen when someone lifts something heavy or goes through a traumatic event like a car crash A herniated disc is also common because of the wear and tear that comes with getting older Most of the time a herniated disc is treated conservatively with over the counter pain relievers anti inflammatory drugs ice packs and heat therapy Physical therapy may also be suggested to help stretch and strengthen the muscles that support your spine If conservative treatments don t help alleviate your pain or if your herniated disc is making your arms or legs weak numb or tingle you may need surgery to remove the damaged part of the disc and relieve the pressure on your nerves In this quick start guide we ll discuss the following in detail What are the symptoms of herniated discs What causes herniated discs How is it diagnosed What are the complications of herniated discs What are the medical treatments for herniated discs How can you prevent herniated discs Managing herniated discs through natural methods Managing herniated discs through diet Keep reading to learn everything you need to know about managing herniated discs through diet and other natural methods [Backache and the Slipped Disc](#) Donald F.
