Software And Its Development:

Software and Its Development Joseph M. Fox, 1982 This book is about software about the development of software and primarily about the development of large scale software This book is for all data processing professionals It deals with what will be the most important technology and tool of the next two decades software It is for the new programmer or user who knows an application and its intricate nuances and is frustrated by the jargon and the confusion of the software world It is for the non data processing executive who wished to gain an overview of the field The first part is readable by those not in the computer field and the whole of it for those doing research on software Data-centric Approaches to Industrial Decisions

P. K. Kapur, Omar Alhazmi, Shakshi Singhal, 2025-07-30 This book explores mathematical modeling predictive analytics and interdisciplinary tools in formulating implementing and evaluating industrial strategies This book presents cutting edge research that intersects advanced computational techniques with practical decision making across industries This edited book showcases a curated collection of peer reviewed contributions from international scholars and practitioners addressing the growing complexity of business decisions in the era of big data AI and digital transformation From cyber physical systems to sustainability analytics and business intelligence each chapter provides a robust academic foundation while offering real world implications for policymakers managers and researchers With a focus on actionable insights the book is a vital reference for operations research analytics and digital strategy professionals and an enriching resource for postgraduate and doctoral scholars across business and engineering disciplines *Data Modeling for Metrology and Testing in Measurement Science* Franco Pavese, Alistair B. Forbes, 2008-12-16 The aim of this book is to provide firstly an introduction to probability and statistics especially directed to the metrology and testing fields and secondly a comprehensive newer set of modelling methods for data and uncertainty analysis that are generally not considered yet within mainstream methods The book brings for the first time a coherent account of these newer methods and their computational implementation They are potentially important because they address problems in application fields where the usual hypotheses that are at the basis of most of the traditional statistical and probabilistic methods for example relating to normality of the probability distributions are frequently not fulfilled to such an extent that an accurate treatment of the calibration or test data using standard approaches is not possible Additionally the methods can represent alternative ways of data analysis allowing a deeper understanding of complex situations in measurement The book lends itself as a possible textbook for undergraduate or postgraduate study in an area where existing texts focus mainly on the most common and well known methods that do not encompass modern approaches to calibration and testing problems The book is structured in such a way to guide readers with only a general interest in measurement issues through a series of review papers from an initial introduction to modelling principles in metrology and testing to the basic principles of probability in metrology and statistical approaches to certainty assessment

Systemic Approach to Categorizing and Modeling Requirements Azeddine Chikh,2025-04-22 Current categorizations of software requirements are highly ambiguous and inconsistent mainly due to the lack of a clear common framework for defining software elements and relevant environmental

factors This book overhauls the traditional approach by proposing an innovative systemic method for categorizing and modeling software requirements It introduces an unprecedented frame of reference putting an end to divergent interpretations by precisely defining software elements and environmental factors This framework forms an indispensable basis for all the other components of this approach a redefinition of requirements a hybrid categorization that combines several taxonomies and scales a metadata model used to qualify requirements and a multi view model that represents all possible categories of requirements By adopting this new approach professionals will be able to improve the clarity precision and relevance of their specifications and thus optimize the success of their software projects
